General Notes and Abbreviations

Abbreviations and what they mean

Abbreviation	Meaning	Abbreviation	Meaning
°d	Degree of German water hardness, unit for assessing water hardness	MOT	Motor module (drive motor + impeller + terminal box/electronics module) for replacement in the TOP ... Series
1/min	Revolutions per minute (rpm)	P _I	Current consumption for shaft power requirement P _W
1~	1-phase alternating current	PLR	Pump central control, Wilo-specific data interface
3~	3-phase alternating current	PT 100	Platinum temperature sensor with a resistance of 100 Ω at 0 °C
-A	Float switch attached	P _W	Shaft power requirement
Autopilot	Automatic adjustment of pump performance during setback phases, e.g. boiler setback operation overnight	Q (= \dot{V})	Volume flow
BA	Building automation	Qz	Approval range for sprinkler pumps
Cap	Capacitors	rbc	Blocking current-proof, no motor protection
Control input 0 - 10 V	Analogue input for external control of functions	RCD	Residual-current device
DM	3-phase AC motor	RMOT	Spare motor (drive motor + impeller + terminal box/electronic module) for replacement
Δp-c	Control mode for constant differential pressure	RV	Non-return valve
Δp-T	Control mode for differential-pressure control as a function of fluid temperature	RVF	Non-return valve, spring-mounted
Δp-v	Control mode for variable differential pressure	-S	Float switch attached
ΔT	Control mode for differential temperature	SBM	Run signal or collective run signal
ECM technology	Electronically commutated motor with new wet rotor encapsulation, newly developed glandless drive concept for high-efficiency pumps	SSM	Fault signal or collective fault signal
EM	1-phase AC motor	TrinkwV 2001	German Drinking Water Ordinance of 2001 (valid from 01.01.2003)
EnEV	German Energy Saving Ordinance (Energieeinsparverordnung (EnEV))	TRS	PTC thermistor sensor
Ext. Aus	Control input "Overriding Off"	TWC	Thermal winding contacts (in motor for monitoring winding temperature, full motor protection through additional tripping unit)
Ext. Min	Control input "Overriding Min", e.g. for setback operation without autopilot	VDI 2035	VDI guideline for the prevention of damage in hot-water heating installations
GRD	Mechanical seal	Wilo-Control	Building automation management with pumps and accessories
GTW	Special cast iron: white malleable cast iron	WRAS	Water Regulations Advisory Scheme (secondary hot water approval for Great Britain and Northern Ireland)
H	Delivery head		Operating mode of twin-head pumps: Individual operation of the respective operating pump
Hz	Approval range for sprinkler pumps		Number of poles of electric motors: 2-poled motor = approx. 2900 1/min at 50 Hz
IF	Interface		Number of poles of electric motors: 4-poled motor = approx. 1450 1/min at 50 Hz
Installation	H = horizontal, V = vertical		Number of poles of electric motors: 6-poled motor = approx. 950 1/min at 50 Hz
Int. MS	Internal motor protection: Pumps with internal protection against unacceptably high winding temperatures		Operating mode of twin-head pumps: Parallel operation of both pumps
IR	Infrared interface		
KTL coating	Cataphoretic painting: Paintwork with high adhesive strength for long-lasting corrosion protection		
KTW	Authorisation for products with plastics, for utilisation in secondary hot water applications		
LON	Local operating network (open, non-manufacturer-dependent, standardised databus system in LON-WORKS networks)		

Material designations and their meaning

Material	Meaning
1.4021	Chrome steel X20Cr13
1.4057	Chrome steel X17CrNi16-2
1.4122	Chrome steel X39CrMo17-1
1.4301	Chrome nickel steel X5CrNi18-10
1.4305	Chrome nickel steel X8CrNiS18-9
1.4306	Chrome nickel steel X2CrNi19-11
1.4401	Chrome nickel molybdenum steel X5CrNiMo17-12-2
1.4408	Chrome nickel molybdenum steel GX5CrNiMo19-11-2
1.4462	Chrome nickel molybdenum steel X2CrNiMoN22-5-3
1.4541	Chrome nickel steel with titanium added X6CrNiTi18-10
1.4542	Chrome nickel steel with copper and niobium added X5CrNiCuNb16-4
1.4571	Chrome nickel molybdenum steel with titanium added X6CrNiMoTi17-12-2
Abrasite	Chilled cast iron material for use in strongly abrasive fluids
Al	Light metal material (aluminium)
Ceram	Liquid ceramic coating; coating with very high adhesive strength for long-lasting corrosion protection
Composite	High-strength plastic material
EN-GJL	Cast iron (cast iron with lamellar graphite)
EN-GJS	Cast iron (cast iron with spheroidal graphite, also called spheroidal cast iron)
G-CuSn 10	Zinc-free bronze
GfK	Fibreglass plastic
GG	See EN-GJL
GGG	See EN-GJS
Inox	Stainless steel
NiAI-Bz	Nickel aluminium bronze
Noryl	Fibreglass-reinforced plastic
PP-GF30	Polypropylene, reinforced with 30% fibreglass
PUR	Polyurethane
SiC	Silicone carbide
ST	Steel
V2A	Material group, e.g. 1.4301, 1.4306
V4A	Material group, e.g. 1.4404, 1.4571

Wear and tear

Pumps or parts of pumps are subject to wear in accordance with state-of-the-art technology (DIN 31051/DIN-EN 13306). This wear may vary depending on operating parameters (temperature, pressure, speed, water conditions) and the installation/usage situation and may result in the malfunction or failure at different times of the aforementioned products/components, including their electrical/electronic circuitry..

Wearing parts are all components subject to rotary or dynamic strain, including electronic components under tension, in particular:

- seals/gaskets (including rotating mechanical seals), seal ring
- bearings and shafts
- stuffing boxes
- capacitors
- relays/contactors/switches
- electronic circuits, semiconductor components, etc.
- impellers
- wearing rings/wearing plates

Pumps and continuous-flow machines, as well as their components with coatings (cataphoresis coating, 2K- or Ceram coating), are subject to constant wear due to the abrasive fluid contents. Therefore, the coating is also included among the wear parts for these units.

We do not accept liability for faults or defects arising from natural wear and tear.

Sewage Pumps for Building Services

Planning guide

Both the sewage generated in a building or on a piece of property and the rainwater which collects on courtyard and roof surfaces should be conveyed to the sewer system with the aid of pump stations and lifting units, insofar as they do not flow naturally downhill into the local sewage network. There are different ways of disposing of this sewage, depending on the respective fluids to be conveyed.

Wilo submersible motor-driven pumps and sewage lifting units are designed especially to meet these different requirements and comply with currently valid EN Standards.

Planning must be carried out in accordance with DIN EN 12050/12056 – Drainage systems for buildings and sites. A distinction is made here between sewage emerging from discharge points above the local backflow level, which must be guided to the public sewer system by taking advantage of natural declines in elevation, and sewage from discharge points whose water levels in the anti-siphon trap lie below the local backflow level. The backflow level is at a minimum the same as the street level (kerb) at the connection point, although local ordinances issued by the responsible government agency can also require that it be at a higher elevation.

Sewage (rainwater and wastewater) which arise at levels below the backflow level must be conveyed to the public sewer system by means of automatically operating lifting units – Wilo sewage lifting units or Wilo submersible motor-driven pump.

According to DIN 1986-100, EN 12050 and EN 12056, the following details are to be observed for installation planning and construction, among others:

- Lifting units are to be designed in terms of performance in such a way that a minimum flow velocity of 0.7 m/s is guaranteed for the prescribed nominal widths of the pressure pipe.
 - Prescribed minimum nominal diameters:
 - Wastewater lifting unit – DN 32
 - Sewage lifting unit – DN 80 (without separation/macerator)
 - The pressure pipe of a lifting unit must be equipped with a non-return valve and laid with its invert above the backflow level. The pressure pipe is not permitted to be connected to wastewater downpipes
 - Wastewater gate valves (supply and pressure sides) are to be installed in accordance with DIN 1986-100, EN 12050/EN 12056
 - Ventilation pipes from lifting units are to be guided to heights above the roof level; the minimum nominal pipe width is DN 70 for sewage lifting units
 - Feed lines are to be laid with sufficient drop-off gradients (a minimum of 1:50)
 - It is expedient to avoid rigidity when laying pipelines through masonry
 - An automatic standby pump is to be provided for if the sewage drain pipe does not allow for interruptions
 - Switchboxes and signalling systems are to be installed at a dry, readily accessible position. The signalling system is to be mounted at a readily noticeable position
 - Lifting units must be serviced regularly
 - The installation area is to be provided with sufficient ventilation and lighting. A working space of at least 600 mm is to be provided for above and next to all operating elements and all parts requiring servicing.
- The lifting unit must be provided with anti-buoyant mounting
- Sewage containing mineral oils or explosive admixtures must be guided through oil precipitators and/or petrol precipitators; those

containing fatty substances must go through grease traps and those with sand through sand catchers. Acidic sewage must be neutralised

Determining the required pump and/or system output

Flow Qp [l/s]:

Corresponds to the total of the incoming wastewater QS added to the incoming rainwater Qr, which must be determined in accordance with EN 12050/EN 12056

QS = amount of wastewater [l/s] made up of the total of all sewage sources, taking into account simultaneity

Qr = amount of rainwater [l/s] totalling the product of precipitation volume, discharge coefficient and precipitation surface

Delivery head H_{Ges} [m]:

Refers to the total derived from the height differential between the lowest collecting tank level and the invert of the backflow loop + the entire friction losses Hf [m] in the pressure pipe.

Note: When selecting a lifting unit, it is necessary to take into account the fact that the pressure difference between the delivery head at duty point with nominal flow rate (taking into account minimum flow volume) and delivery head with zero flow volume must still amount to approximately 2–3 m in order to open the non-return valve.

Operating modes (in accordance with DIN EN 60034-1)

S1 = Permanent operation

The motor temperature increases during operation until it reaches the operating temperature (thermal persistent state). The temperature is dissipated during operation by means of coolant and/or the surrounding fluid. The machine can be operated without interruption while in this status. Specification of the installation type (surfaced/submerged) and/or of the installation is also to be taken into account! Permanent operation has no effect on this. S1 does not explicitly mean 24 h/day, 7 days/week!

Please observe the service life specifications and/or running times per years in the respective documentation.

S2 = Short-term operation

The motor cannot be operated continuously, because the power dissipation that is transformed into heat in the motor exceeds the heat dissipation capacity of the cooling apparatus. The max. operating period is specified in minutes, e.g. S2-15. There must be a pause until the machine temperature does not deviate by more than 2K from the ambient temperature.

S3 = Intermittent operation

This operating mode represents a conventional load for sewage pumps. It describes a ratio of operating time to downtime. Both values must be indicated on the name plate and/or in the installation and operating instructions. For S3 operation, calculations are always in reference to a time period of 10 min.

Examples:

S3 - 20% means: Operating time 20% of 10 min = 2 min
Standstill time 80% of 10 min = 8 min

S3 - 3 min means: Operating time 3 min
Standstill time 7 min

If 2 values are specified, then this means, for example with:

S3 - 5 min/20 min: Operating time 5 min
Standstill time 15 min

S3 - 25%/20 min: Operating time 5 min
Standstill time 15 min

Additional planning instructions:

See Wilo planning manual guide "Sewage" (must be ordered).

Sewage Pumps for Building Services

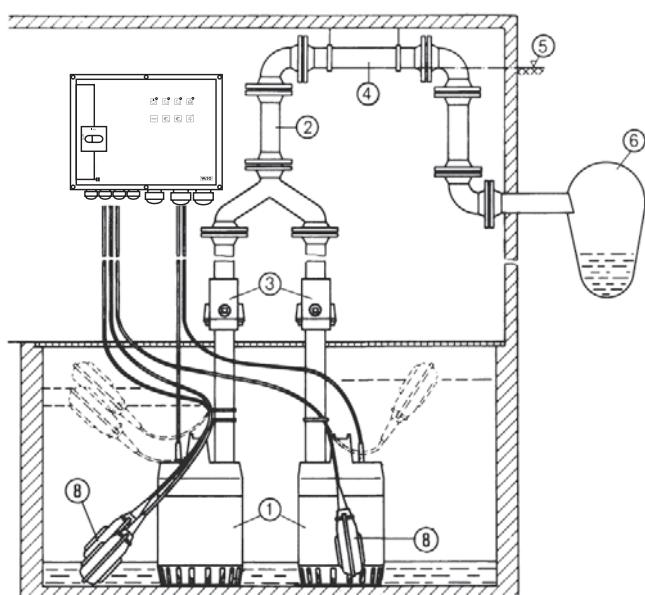

WILO

Planning guide

Wastewater lifting unit (sewage without faeces) according to EN 12050-2

Double pumps – Wilo-Drain Twister

Double pumps-drainage station

Wilo-Drain Twister

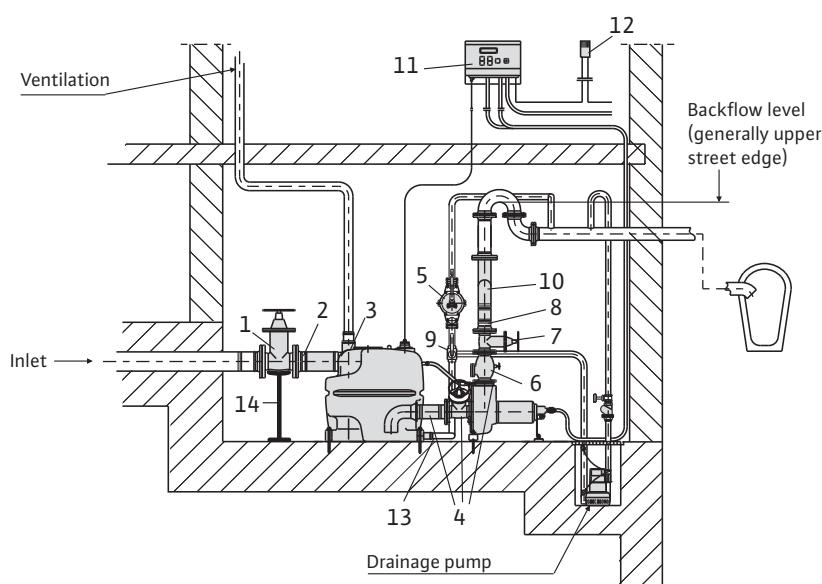

- 1 Submersible motor pump (2x)
- 2 Pressure pipe DN 32 with Y-piece
- 3 Non-return valve
- 4 Backflow loop
- 5 Backflow level
- 6 Channel
- 7 Switchgear
- 8 Float switch for monitoring levels and alarms

Configuration of the backflow loop

The backflow loop should not be set up in direct perpendicular configuration over the site of the lifting unit if at all possible. The rest of the sewage pipe is to be laid at an incline downward to the connection to the sewer system.

Wastewater and sewage lifting unit (sewage with faecal content) in accordance with EN 12050-1

Double system – Wilo-DrainLift XXL

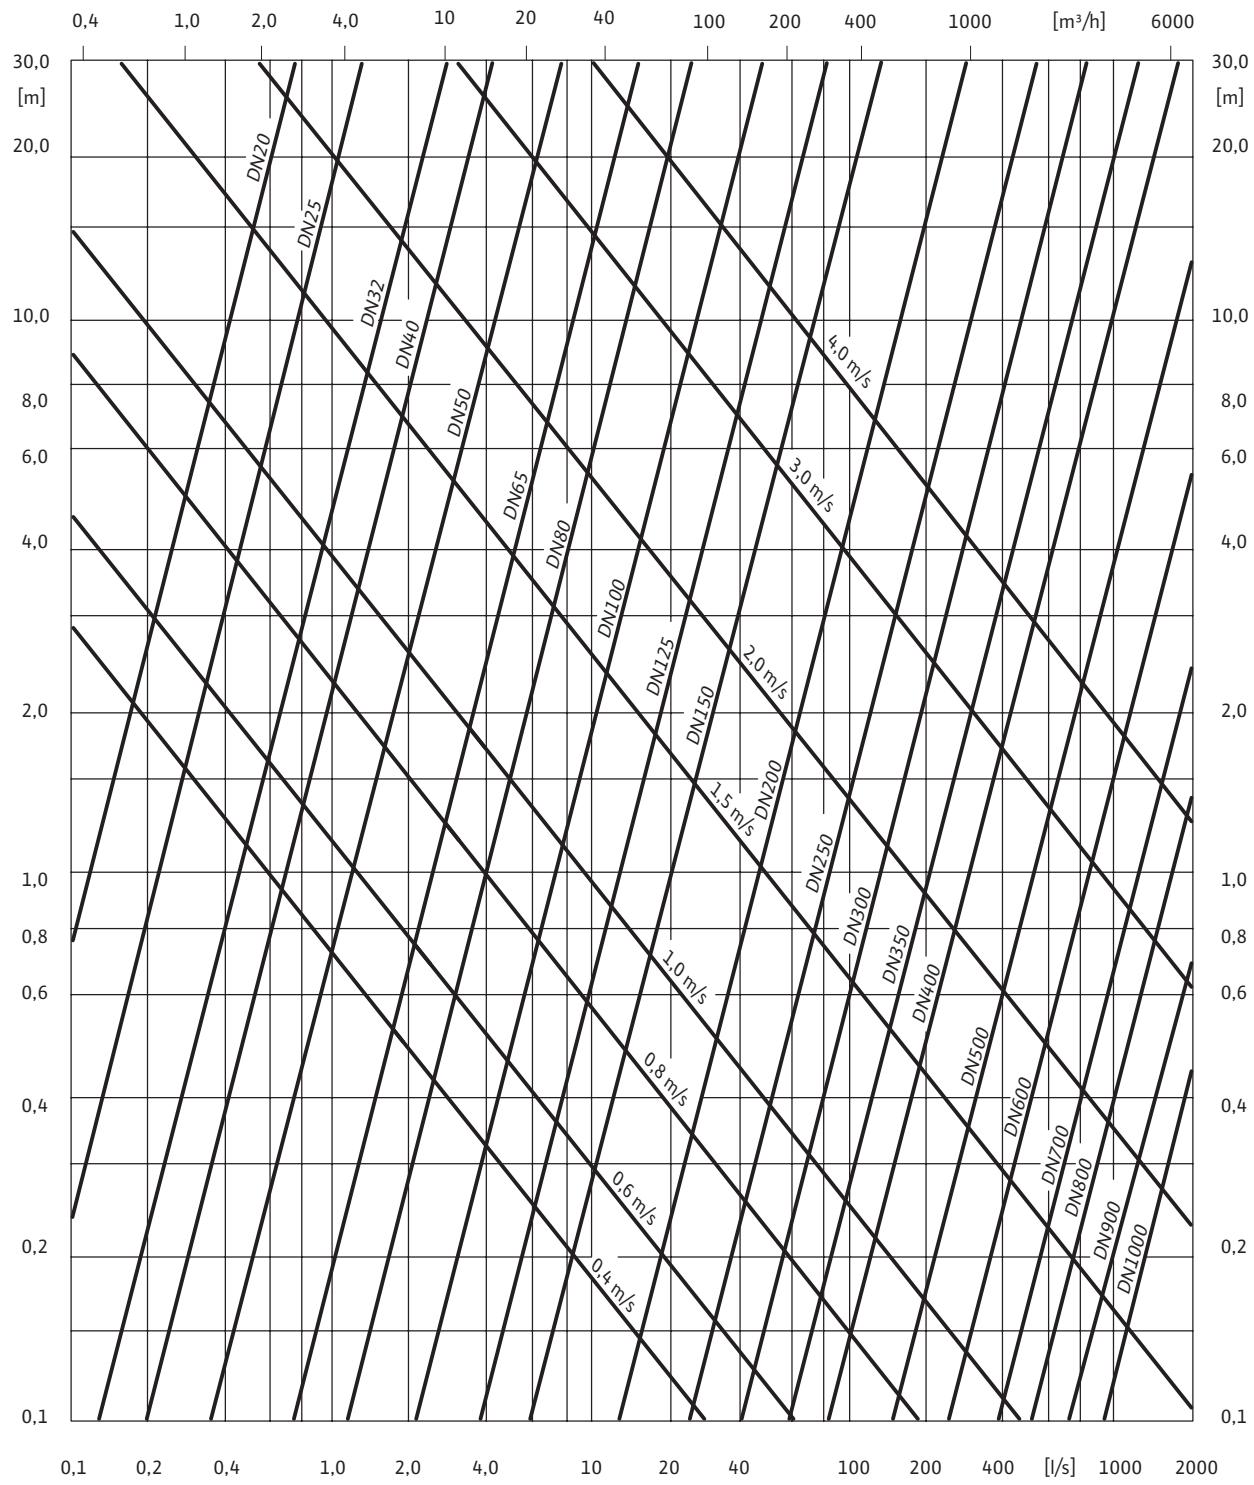

- 1 Gate valve DN 100 or DN 150
- 2 Single-ended flanged nipple with hose and hose clips DN 100 or DN 150
- 3 Elastic hose connection for ventilation
- 4 Kit containing connection between reservoir and pump, 2 gate valves and ventilation flange with hose
- 5 Diaphragm hand pump 1 ½"
- 6 Non-return valve DN 80 or DN 100
- 7 Gate valve DN 80 or DN 100
- 8 Single-ended flanged nipple with hose and hose clips DN 80 or DN 100
- 9 3-way tap
- 10 Y-pipe DN 80 or DN 100
- 11 Microprocessor-controlled switchgear
- 12 KAS, small alarm switchgear with signalling tone
- 13 Elastic hose connection for diaphragm hand pump
- 14 Fitting support for weight relief

Sewage Pumps for Building Services

Submersible motor pumps with macerator

Series overview Wilo-Drain MTC, MTS

Series: Wilo-Drain MTC

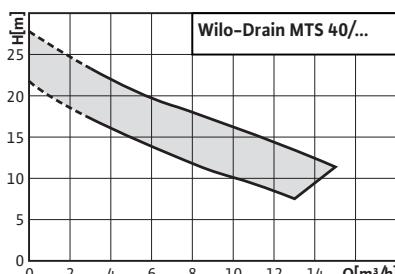

> Submersible sewage pump with macerator

> Application:

- Pumping of sewage containing faeces, as well as municipal and industrial sewage with long-fibre constituents, from individual buildings and for commercial utilisation. The macerator breaks down the solid constituents into smaller pieces to generate a easily pumpable medium.

Series: Wilo-Drain MTS 40/...

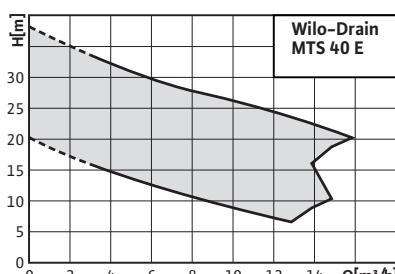

> Submersible sewage pump with patented macerator

> Application:

- Pumping of sewage containing faeces, as well as municipal and industrial sewage with long-fibre constituents, from individual buildings and for commercial utilisation. The patented macerator reduces the solid contents of the sewage flow into a medium containing smaller particles which can be more easily conveyed.

Series: Wilo-Drain MTS 40 E

> Submersible sewage pump with patented macerator

> Application:

- Pumping of sewage containing faeces, as well as municipal and industrial sewage with long-fibre constituents, from individual buildings and for commercial utilisation. The patented macerator reduces the solid contents of the sewage flow into a medium containing smaller particles which can be more easily conveyed.

Sewage Pumps for Building Services

Submersible motor pumps with macerator

Series description Wilo-Drain MTC

Construction

Submersible sewage pump as submersible monobloc unit with macerator for vertical wet sump installation; detachable connection cable.

Motor

Three-phase current asynchronous motor 3~400 V, 50 Hz or alternating current motor 1~230 V, 50 Hz (MTC 40). Protection class IP 68, thermal winding contacts, insulation class F.

Bearing configuration

Bearing configuration of the motor shaft in permanently lubricated, low-maintenance roller bearings.

Radial shaft sealing ring

The motor is insulated with 2 mechanical seals. The exception here is the MTC32 F 39.10, which is sealed on the motor side with 2 radial shaft sealing rings.

Scope of delivery

Pump ready for connection with 10 m connection cable with bare cable end (3~), or with shockproof plug, float switch (1~) and installation and operating instructions. Other cable lengths on request.

Wilo-Drain MTC

Submersible sewage pump with macerator, 2-pole

Type key

Example: Wilo-Drain MTC 32 F 55.13/66 Ex

MT	Macerator Technology
C	Grey cast iron
32	Nominal diameter [mm]
F	Impeller shape
55	Max. delivery head [m]
.13	Maximum volume flow [m^3/h]
/66	Power P_2 [kW] = value/10 = 6.6 kW
Ex	Protected against explosions in accordance with ATEX

Application

Wilo-Drain MTC submersible motor pumps are suitable for pumping sewage containing faeces and municipal and industrial sewage, even with long-fibre constituents for

- house and site drainage
- sewage and water management
- environmental and wastewater treatment technology

Series description Wilo-Drain MTS 40...

MTS 40/...

MTS 40 E

Wilo-Drain MTS

Submersible sewage pump with macerator, 2-pole

Type key

Example: **Wilo-Drain MTS 40/27-1-230-50-2**

MT	Macerator Technology (macerator pumps series)
S	Stainless Steel (stainless steel) motor
40	Pressure port nominal diameter [mm]
/27	Max. delivery head [m]
1-230	Alternating current motor
50	Mains frequency 50 Hz
2	No. of poles

Example: **Wilo-Drain MTS 40 E 23.14/12**

MT	Macerator Technology (macerator pumps series)
S	Stainless Steel (stainless steel) motor
40	Pressure port nominal diameter [mm]
E	Single-channel hydraulics
23.	Max. delivery head [m]
14	Max. volume flow [m^3/h]
/12	Power P_2 [kW] = value/10 = 1. kW

Application

Wilo-Drain MTS 40 submersible sewage pumps with macerator are suitable for pumping sewage containing faeces. The Wilo macerator breaks down the solid constituents into smaller pieces to generate an easily pumpable fluid. Preferred utilisation with pressurised drainage. The pressurised drainage is utilised in situations where the costs of a conventional sewage system with an open channel would be unacceptably high, e.g. with:

- high groundwater table levels
- absence of ground incline
- occasional presence of sewage
- vacation house, camping site, among others.

- Installation costs are decidedly lower because of the small pipeline diameter, e.g. DN 40,

Can be utilised in the following installation types

- stationary wet
- portable

Construction

Submersible sewage pump as submersible monobloc unit with macerator for vertical wet installation

- innovative patented macerator
- unimpeded supply line to the impeller
- internal rotating blade
- spherically formed macerator
- maceration of substances being conveyed
- pulling cut (shearing cut)

Motor

Three-phase current asynchronous motor made of stainless steel 3~400 V, 50 Hz or alternating current motor made of stainless steel 1~230 V, 50 Hz each of protection class IP 68, protected by thermal winding contacts, insulation class F.

Bearing configuration

Bearing configuration of the motor shaft in permanently lubricated roller bearings.

Radial shaft sealing ring

MTS 40/...:
Direction of rotation-independent mechanical seal on pump side, shaft seal ring on the motor end. Oil-filled intermediate chamber provides cooling and lubrication, even with dry run.

MTS 40 E:
Direction of rotation-independent mechanical seal on the pump and motor sides. Oil-filled intermediate chamber provides cooling and lubrication, even with dry run.

Hydraulics

Closed single channel wheel (with a free ball passage of 10 mm) in conjunction with the patented macerator make possible blockage-free pumping and optimal efficiency.

Scope of delivery

Pump ready for connection with 10 m connection cable,
at 3~400 V: with bare cable end,
at 1~230 V: with capacitor connection box and shock-proof plug.

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Series overview Wilo-Drain TC 40, STS 40, 65, 80, 100, TP 50, 65

Series: Wilo-Drain TC 40

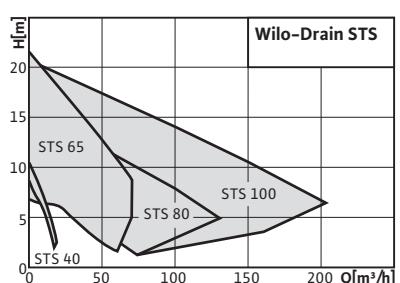

¹⁾ not within the scope of EN 12050-1

> Submersible sewage pump

> Application:

- Pumping heavily contaminated fluids for
 - house/site drainage
 - sewage and water management
 - environmental and water treatment technology

Series: Wilo-Drain STS 40, 65, 80, 100

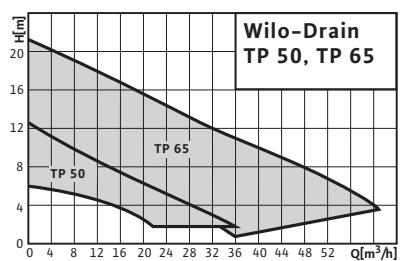

> Submersible sewage pump

> Application:

- Pumping of faeces, municipal and industrial sewage, even with long-fibre constituents, for
 - house/site drainage
 - sewage and water management
 - environmental and water treatment technology
- industrial and processing technology

Series: Wilo-Drain TP 50, 65

²⁾ not within the scope of DIN EN 12050-1

> Submersible sewage pump

> Application:

Submersible motor pumps without macerator

Series overview Wilo-Drain TP 80, 100, 150, Wilo-EMU FA

Series: Wilo-Drain TP 80, 100, 150

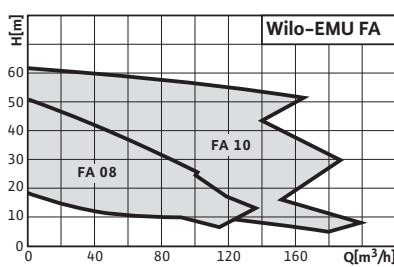

> Submersible sewage pump

> Application:

- Pumping of faeces, municipal and industrial sewage, even with long-fibre constituents, for:
 - house/site drainage
 - sewage and water management
 - environmental and water treatment technology
 - industrial and processing technology

Series: Wilo-EMU FA 08, 10

> Submersible sewage pump

> Applications:

- Pumping of faeces, municipal and industrial sewage, even with long-fibre constituents, for:
 - house/site drainage
 - sewage and water management
 - environmental and water treatment technology
 - industrial and processing technology

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Series overview Wilo-Drain TP 80, 100, 150, Wilo-EMU FA

Series: Wilo-Drain TP 80, 100, 150

> Product advantages:

- Stainless steel & Composite
- Ex protection as standard equipment
- Low weight
- Detachable connection cable
- Standard-equipped with cooling jacket
- Corrosion-resistant (e.g. swimming-pool drainage)

> Additional information:	Page
• Series description	91
• Technical data	92
• Pump curves	98
• Dimensions	102
• Terminal diagrams.....	108
• Mechanical accessories	118

Series: Wilo-EMU FA 08, 10

> Product advantages:

- Separation chamber with double seals
- Wide performance spectrum

> Additional information:	Page

Series description Wilo-Drain TC 40

Wilo-Drain TC 40

Submersible sewage pump, 2-pole

Type key

Example: Wilo-Drain TC 40/8

T	Submersible motor pump
C	Grey cast iron
40	Nominal diameter [mm]
/8	Max. delivery head [m]

Application

Wilo-Drain TC 40 submersible motor pumps are well-suited for pumping heavily contaminated fluids for

- house and site drainage
- sewage¹⁾ and water management
- environmental and water treatment technology

¹⁾ not within the scope of EN 12050-1

Construction

Submersible sewage pump with large free ball passage (35 mm) as submersible monobloc unit for vertical wet sump installation, vortex impeller.

Motor:

Alternating current motor 1~230 V, 50 Hz

Motor protection:

Thermal winding contacts (TWC)

Scope of delivery

Pump ready for connection with 5 m power cable, shock-proof plug, float switch and installation and operating instructions.

Wilo-Drain STS 40

Submersible sewage pump, 2-pole

Type key

Example: Wilo-Drain STS 40/10 A

STS	Submersible motor pump
40	Nominal diameter [mm]
/10	Max. delivery head [m]
A	With float switch and plug If not otherwise indicated: without float switch, bare cable end (only for 3~)

Application

Wilo-Drain STS 40 Submersible motor pumps are well-suited for pumping heavily contaminated fluids for

- house and site drainage
- sewage¹⁾ and water management
- environmental and water treatment technology
- industrial and processing technology

¹⁾ not within the scope of DIN EN 12050-1

Construction

Submersible sewage pump with large free ball passage (40 mm) as submersible monobloc unit for vertical wet sump installation.

Motor:

Alternating current motor 1~230 V, 50 Hz
Three-phase motor 3~400 V, 50 Hz

Motor protection:

Single-phase: thermal winding contacts (TWC)
Three-phase: thermal motor operation monitoring and phase failure protection self-switching

Scope of delivery

Pump ready for connection with connection cable (either 5 or 10 m), equipped with float switch and plug (version A), if necessary, installation and operating instructions

65 Nominal diameter [mm]
F Vortex impeller
16 Max. delivery head [m]
.70 Maximum volume flow [m^3/h]
/25 Power P_2 [kW] = value/10 = 2.5 kW

Application

Wilo-Drain STS submersible motor pumps are suitable for pumping sewage containing faeces¹⁾ and municipal and industrial sewage, even with long-fibre constituents for

- house and site drainage
- sewage and water management
- environmental and water treatment technology

high operational safety because of optimal ball passage.

¹⁾ Not within the scope of DIN EN 12050-1

Construction

Submersible sewage pump as submersible monobloc unit for wet sump installation, optionally with cooling jacket, also suitable for dry sump installation.

- detachable connection cable per plug connection
- large free ball passage (65 mm)
- resistant to corrosion and wear and tear
- vortex impeller

Motor

AC (1~230 V, 50 Hz) or three-phase asynchronous motor (3~400 V, 50 Hz), protection class IP 68, thermal winding contacts, insulation class F. Other voltages and frequencies on request.

Bearing configuration

Bearing configuration of the motor shaft in permanently lubricated, low-maintenance roller bearings.

Radial shaft sealing ring

Either a mechanical seal (STS 65 F) or a rotary shaft seal (STS 65/...) can be chosen for the motor side. Sealing is accomplished on the pump side by means of a direction of rotation-independent mechanical seal.

Scope of delivery

Pump ready for connection with 10 m connection cable with bare cable end and installation and operating instructions. Other cable lengths on request.

Sewage Pumps for Building Services

Submersible motor pumps without macerator

WILO

Series description Wilo-Drain STS 80, 100

Wilo-Drain STS 80, 100

Submersible sewage pump, 4-pole

Type key

Example: Wilo-Drain STS 80 F 81.120/20

STS	Submersible motor pump
80	Nominal diameter [mm]
F	Vortex impeller
81	Max. zero-delivery head [m]
120	Max. volume flow [m^3/h]
20	Power P_2 [kW] = value/10 = 2.0 kW

Application

Wilo-Drain STS submersible motor pumps are suitable for pumping faeces, municipal and industrial sewage, even with long-fibre constituents, for

- house and site drainage
- sewage and water management
- environmental and water treatment technology
- industrial and processing technology

High operational safety because of optimal free ball passage.

Construction

Submersible sewage pump as submersible monobloc unit for vertical wet sump installation:

- detachable power cable
- large free ball passage
- corrosion- and wear-resistant

Motor:

Three-phase asynchronous motor 3~400 V, 50 Hz, protection class IP 68, thermal winding contacts, insulation class F. Other operating voltages and frequencies on request.

Bearing configuration:

Bearing configuration of the motor shaft in permanently lubricated, low-maintenance roller bearings.

Shaft sealing:

Mechanical seal on pump side and shaft seal ring on the motor end.

Scope of delivery

Pump ready for connection with 10 m connection cable with bare cable end and installation and operating instructions. Other cable lengths on request.

WILO

Series description Wilo-Drain TP 50, 65

Wilo-Drain TP

Submersible sewage pump

Type key

Example: **Wilo-Drain TP 65 E 114/11-1A**

TP Submersible motor pump

65 Nominal diameter [mm]

E Impeller shape: E = Single-channel wheel
F = Vortex impeller

114 Nominal diameter of the impeller [mm]

/11 Power P_2 [kW] = value/10 = 1.1 kW

-1 1 = Alternating current (1~)

No specification = Three-phase current (3~)

A With float switch and plug

Application

Wilo-Drain TP submersible motor pumps are suitable for pumping very contaminated fluids for

- house and site drainage
- sewage¹⁾ and water management
- environmental and water treatment technology
- industrial and processing technology

¹⁾ not within the scope of DIN EN 12050-1

High operational safety because of free ball passage of 44 mm. Due to the light weight, optimally suited as an emergency/replacement pump.

Can be utilised in the following installation types

- stationary wet
- portable

Construction

Submersible sewage pump as submersible monobloc unit for vertical wet sump installation:

- Inox & Composite
- low weight
- detachable connection cable
- corrosion-resistant

Motor:

Three-phase current asynchronous motor 3~400 V, 50 Hz or
Alternating current motor 1~230 V, 50 Hz

Motor protection:

Single-phase: Thermal winding contacts (TWC)

Three-phase: Motor protection is to be provided onsite starting from 1.1 kW = thermal winding contacts (TWC)

Bearing configuration:

Bearing configuration of the motor shaft in permanently lubricated, low-maintenance roller bearings.

Shaft sealing:

By means of a mechanical seal on the pump side, independent of the direction of rotation, and a radial shaft sealing ring on the motor side. Intermediate chamber containing oil is used for cooling and lubrication.

Hydraulics:

Option of either a vortex or a single-channel impeller with a free ball passage of 44 mm.

Scope of delivery

Pump ready for connection with 10 m connection cable and bare cable end with three-phase version 3~400 V, 10 m connection cable and switchbox (on/off; terminal block) with AC version 1~230 V and installation and operating instructions.

A-Model:

Pump ready for connection with 10 m connection cable, plug [CEE/shockproof], float switch and installation and operating instructions.

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Mechanical accessories Wilo-Drain TP 50, 65

Stationary wet sump installation TP 50 and TP 65

Foot elbow incl. rope guide (item 1)

Made of GG 25 (EN-GJL-250), including pump holder, profile joint, installation and floor fixation accessories and guide tube bracket. Complete 7 m rope guide for 3.5 m installation depth.

For connection DN 50 or DN 65. On-site installation with guide tube R1" alternatively possible (scope of delivery incl. chain, item 6).

	TP 50	TP 65
A	150	180
B	300	360
C	150	200
D	242	280

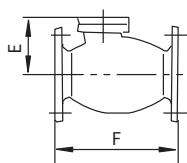

Chain (item 6)

Made of galvanised steel, incl. shackles made of stainless steel, length: 5 m, lifting capacity: 250 kg
(included in scope of delivery item 1)

Non-return valve (item 2a)

Rp 2-female thread, GG 25 (EN-GJL-250)
only for TP 50

Non-return valve (item 2)

DN 50, DN 65, GG 5 (EN-GJL-250), flange PN 10/16, with non-constricted passage, cleaning aperture and ventilation device incl. mounting accessories, drawing No. 53.4-309

Bend (item 4)

DIN 28637, GGG (EN-GJS-400-15), with
1 set of mounting accessories for a flange
connection. Flange PN 10/16, in acc. with
DIN 2501, DN 65 only for TP 65

Mounting accessories (item 5)

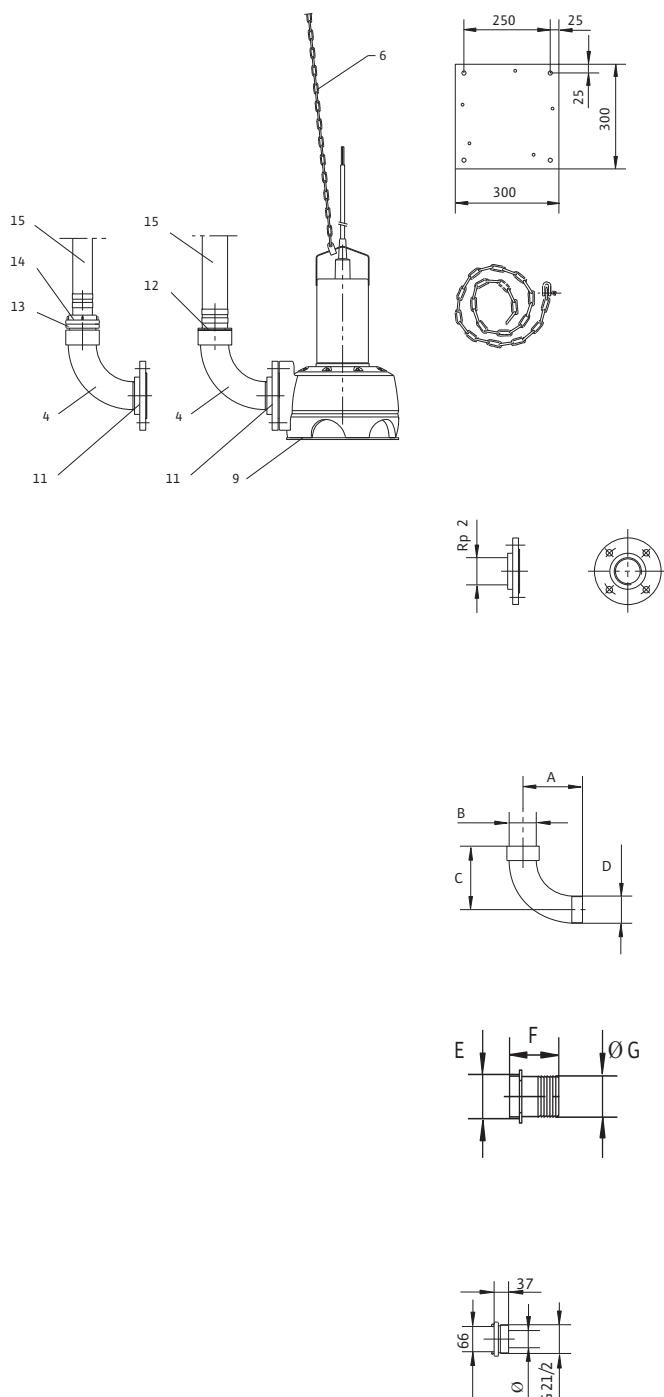

For one flange–flange connection, with
4 screws and screw nuts in addition to 1 flat
gasket. Flange PN 10/16, in acc. with
DIN 2501, DN 65 only for TP 65

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Mechanical accessories Wilo-Drain TP 50, 65

Portable wet sump installation TP 50 and TP 65

Base plate (item 9)

For TP 65, made of galvanized steel, consisting of:
1 base plate and fixation material (required in the presence of muddy subsoil; prevents sinking)

Chain (item 6)

Made of galvanised steel, incl. shackles
made of stainless steel, length: 5 m, lifting capacity: 250 kg

Counter flange (item 11)

Made of galvanized steel, incl. mounting accessories
DN 50 on Rp 2-female thread (T 50)
DN 65 on Rp 2 1/2-female thread (TP 65)

Bend (item 4)

Made of galvanised steel, with female/male thread R/G 2 or 2 1/2

F	90	100
G	60	70

Storz-pipe coupling (item 13)

Made of aluminium, tappet clearance 66 mm, male thread R 2 (TP 50)
Male thread G 2 1/2 (TP 65)

Mechanical accessories Wilo-Drain TP 50, 65

Portable wet sump installation TP 50 and TP 65

Storz-hose coupling (item 14)

Made of aluminium, in acc. with DIN 14321, Storz 52-C for hose inside ϕ 52 mm, incl. hose clip, tappet clearance 66 mm

can be wound up

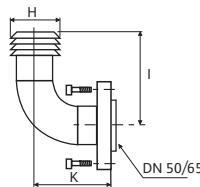

Pressure hose (item 15)

TP 50: made of synthetic materials, PN6, hose inside ϕ 52/60 mm, length: 10 m

TP 65: made of synthetic materials, PN 8, manufactured in acc. with DIN 14811 hose inside ϕ 70 mm,

For item 12, length: 10 m or:

Pressure hose for Storz-hose coupling, made of synthetic materials, PN 8, incl. hose clip, for Storz 52-C connection, hose inside ϕ 52 mm, length: 10 m

Bend (item 16)

For hose connection including mounting accessories for direct connection

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Sewage Pumps for Building Services

Submersible motor pumps without macerator

WILO

Series description Wilo-Drain TP 80, 100, 150

Wilo-Drain TP

Submersible sewage pump

Type key

Example: Wilo-Drain TP 100 E 210/52

TP Submersible motor pump

100 Nominal diameter [mm]

E Impeller shape:

E = single-channel impeller

F = vortex impeller

M = multi-channel impeller

210 Nominal diameter of the impeller [mm]

/52 Power P_2 [kW] = value/10 = 5.2 kW

Application

Wilo-Drain TP 80 to 150 submersible motor pumps are suited for pumping faeces, municipal and industrial sewage, even with long-fibre constituents, for

- house and site drainage
- sewage and water management
- environmental and water treatment technology
- industrial and processing technology

High operational safety because of optimal free ball passage. Also suitable for emergency/catastrophe utilisation because of its low weight.

Can be utilised in the following installation types

- stationary wet
- portable wet
- vertically dry (without Ex-protection)
- horizontal dry installation on demand

Construction

Submersible sewage pump as submersible monobloc unit for vertical wet sump installation or vertical dry sump installation

- Inox & Composite
- Ex protection as standard equipment (for connection with TWC and completely submerged hydraulics. Follow instructions in the installation and operating instructions)
- low weight
- leakage detection
- sheath current cooling
- detachable connection cable
- large, free ball passage
- resistant to corrosion and wear and tear

Motor

Three-phase asynchronous motor 3~400 V, 50 Hz, protection class IP 68, leakage detection, thermal winding contacts. Insulation class F. Other operating voltages and frequencies available on request.

Caution

When connecting the SK 545 switchgear tripping unit that is provided onsite by the customer (see electrical accessories), use for connecting thermal winding contact (TWC) and leakage detection (TWC connection is with a maximum of 30 V, max. 30 mA, observe installation and operating instructions).

Bearing configuration

Bearing configuration of the motor shaft in permanently lubricated, low-maintenance roller bearings.

Motor cooling

Permanently blockage-free sheath current cooling with patented return flow pipe.

Radial shaft sealing ring

Double direction of rotation-independent mechanical seal on the pump and motor sides.

Leakage detection

Signal concerning moisture seepage in the motor space.

Hydraulics

Standard-equipped with patented spiral floor plate for blockage-free reliable permanent operation (single-channel impeller).

TP 80: Single-channel impeller/vortex impeller
Free ball passage 80 mm

TP 100: Single-channel impeller/vortex impeller
Free ball passage 95/100 mm

TP 150: Single-channel impeller/multi-channel impeller
Free ball passage 100/125 mm

Scope of delivery

Pump ready for connection with 10 m connection cable, bare cable end and installation and operating instructions. Other cable lengths on request.

WILO

Series description Wilo-EMU FA

Wilo-EMU FA

Submersible sewage pump

Type key

New:

Example: **Wilo-EMU FA 08.43-120E + T13-2/12H**

FA	Submersible sewage pump
08	Pressure-side connection DN 80
43	Hydraulics performance characteristic number
120	Impeller diameter
E	Impeller shape: E = Single-channel impeller W = Vortex impeller Z = multi-channel impeller
T	Motor version
13	Size
2	No. of poles
12	Motor construction length
H	Standard version K = Block gasket case G = Version with 2 GRD

Application

Wilo-EMU FA submersible motor pumps are suitable for pumping faeces, municipal and industrial sewage, even with long-fibre constituents, for:

- house and site drainage
- sewage and water management
- environmental and water treatment technology
- industrial and processing technology

Construction

Submersible sewage pump as submersible monobloc unit for vertical wet installation

Scope of delivery

Pump ready for connection with 15 m connection cable with bare cable end and installation and operating instructions. (Other cable lengths on request).

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Sewage Pumps for Building Services

Submersible motor pumps without macerator

WILO

Mechanical accessories Wilo-Drain STS 80, 100 / TP 80, 100, 150

Stationary wet sump installation

For Wilo-EMU FA 08, 10, Wilo-Drain STS 80, 100 / TP 80, 100, 150

Chain (item 6)

Made of stainless steel, incl. shackles
Length: 5 and 10 m, lifting capacity: 400 kg

Non-return valve (item 2)

Made of GG 25, (EN-GJL-250), with non-constricted passage, including cleaning aperture and ventilation device, mounting accessories, flange PN 10/16, in acc. with DIN 2501, with (*) or without drawing No. (drawing No. 53.4-309) DN 80/100/150

	DN 80	DN 100	DN 150
Q	240	270	335
R	245	282	397
S	260	300	400

Gate valve (item 3)

Made of GG 25, (EN-GJL-250) mounting accessories, flange PN 10/16 in acc. with DIN 2501, DN 80/100/150

	DN 80	DN 100	DN 150
T	295	325	425
U	180	190	210

For Wilo-Drain STS 80, 100 / TP 80, 100, 150

Bend (item 4)

Made of GGG (EN-GJS-400-15), with 2 flanges, mounting accessories for a flange connection, flange PN 10/16, DIN 28637, DN 80/100/150

	DN 80	DN 100	DN 150
V	165	180	220
W	165	180	220

Y-piece (item 8)

For double-pump systems
Made of galvanized steel 37 with 2 sets of mounting accessories, flange PN 10/16, DIN 2501, DN 80/80/80, 100/100/100 or 150/150/150

	DN 80	DN 100	DN 150
X	615	615	920
Y	168	208	287
Z	167	207	287

STS/TP 80, 100 Pipe connector, (item 7)

Made of galvanised steel, fits guide tube 2", required with guide tube more than 6 m in length

Mounting accessories (item 5)

For flange connection with 8 screws and nuts, as well as 1 flat gasket, for flange PN 10/16, DIN 2501

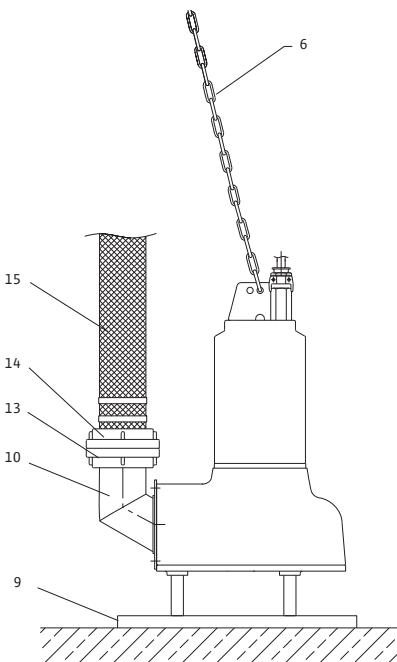

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Mechanical accessories Wilo-Drain STS 80, 100 / TP 80, 100, 150

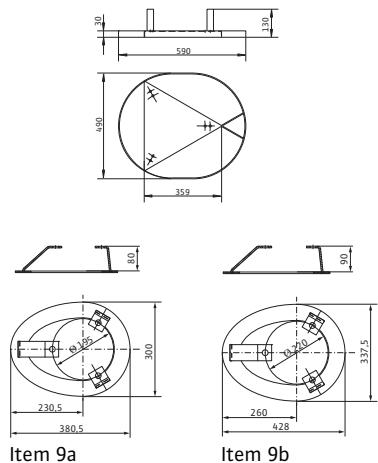

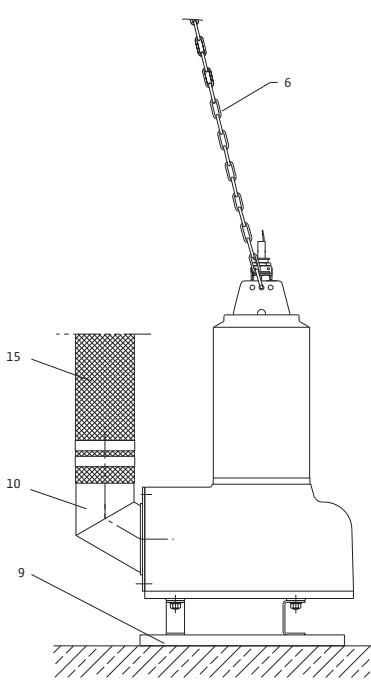

Portable wet sump installation

For Wilo-Drain STS 80, 100 / TP 80, 100, 150

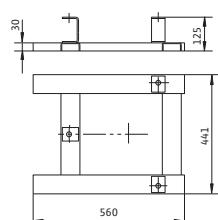

For Wilo-EMU FA 08, 10
see pump dimension drawing

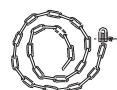

For Wilo-Drain TP 150

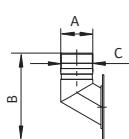

TP 80/100 Ground support foot (item 9)
Made of stainless steel, comprising 3 support feet, 1 base plate and fixation material

TP 150 Ground support foot (item 9)
Made of stainless steel, comprising 3 support feet, 1 base plate and fixation material

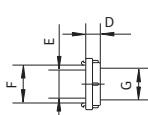

Chain (item 6)
Made of stainless steel, incl. shackles
Length: 5 and 10 m, lifting capacity: 400 kg

Bend (item 10)
Made of stainless steel, anchoring option for direct hose connection or installation of Storz-pipe coupling. Variable set-up possible with 45° hole pitch (TP 100, 150).

	DN 80	DN 100	DN 150
A	G 3	G 4	Ø 148
B	240	280	432.5
C	Ø 89	-	-

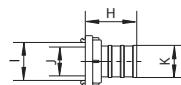

Storz-pipe coupling for installation on the pipe bend (item 13)
Made of aluminium, with R3 or R4 female thread for nominal connection width 80/100

	DN 80	DN 100
D	40	48
E	Ø 78	Ø 100
F	105	133
G	R 3	R 4

Mechanical accessories Wilo-Drain STS 80, 100 / TP 80, 100, 150

Portable wet sump installation

For Wilo-Drain STS 80, 100 / TP 80, 100, 150

Storz-hose coupling (item 14)

Made of aluminium, for hose interior ø90/
110 mm

	DN 80	DN 100
H	140	170
I	105	133
J	ø 80	ø 100
K	ø 90	ø 110

can be wound up

Pressure hose for direct hose connection (item 15)

Material: Synthetic material P 8 incl. 2 hose
clips, hose inside ø 90/110/150 mm, length
10, 20 and 30 m

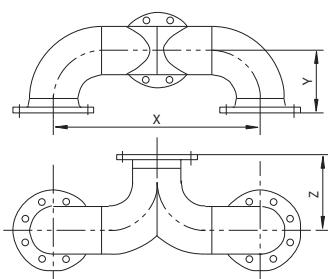

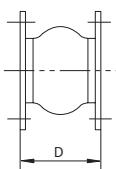

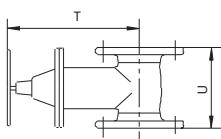

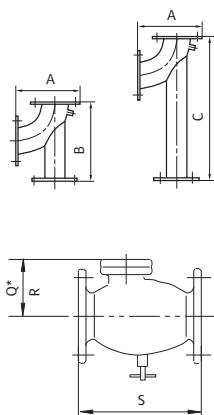

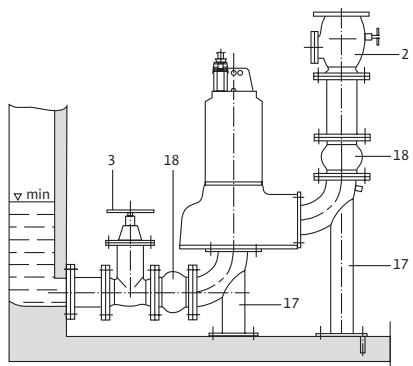

Sewage Pumps for Building Services

Submersible motor pumps without macerator

Mechanical accessories Wilo-Drain TP 80, 100, 150

Stationary, dry sump installation, vertical

For Wilo-Drain TP 80, 100, 150

Set-up set (item 17)

Including fixation material and 2 flange connections (on the pressure and inlet side).

52 customer service technicians.
Overwhelming availability.
1 telephone number.
Everywhere in Germany.

Wilo factory customer service.

The Wilo factory customer service technicians are partners who are there for you with their practical support in all of Germany 365 days a year. Your personal contact partner on site offers you all conceivable support. This local service works so well thanks to our unparalleled organisational structure. Everything comes together in our factory-owned Wilo Service Centre. Based on this, every service call is coordinated perfectly via your personal control centre, and the Wilo customer service technician will be on site to give optimum support with a lot of useful information.

Product descriptions

Switchgear Wilo-EC-Drain 1x4.0

Electronically controlled switchgear for the automatic, transmitter-dependent control of 1 wastewater/sewage submersible motor pumps of the Wilo-Drain series.

- Full motor protection with integrated motor current monitoring and thermal winding contact assessment
- Lockable main switch
- Transmitter connection for float switch, type WA 65, WA 95
- Button for manual mode of the pump
- High water alarm
- Forced switch-on with high water
- Potential-free fault signal (changeover contact) and potential-free operating signal (change-over contact)
- Integrated mains-dependent alarm buzzer
- Operation, high water and malfunction display via LEDs in the front panel

Technical data:

Operating voltage: 1~230 V, 3~400 V, 3~230 V

Connected load P_2 : 4.0 kW

Maximum current: 12A

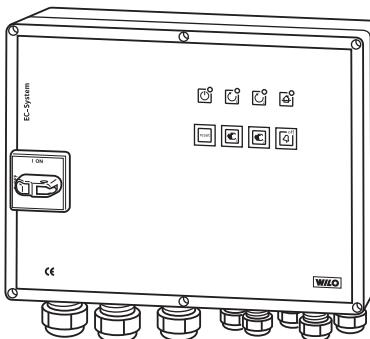

Frequency: 50/60 Hz

Protection class: IP 65 (within buildings/switch cabinets)

Dimensions (W x H x D): 215 x 220 x 125 mm

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. Ex-uncoupling relays are to be provided for pump control in potentially explosive areas.

Switchgear Wilo-EC-Drain 2x4.0

Microprocessor-controlled switchgear for the automatic, transmitter-dependent control of 2 wastewater/sewage submersible motor pumps of the series Wilo-Drain.

- Motor protection by means of built-in thermal winding contact assessment
- Lockable main switch
- Transmitter connection for float switch, types WA 65, WA 95 and MS 1
- 2 buttons for manual mode of the pumps
- Adjustable pump kick function for a pump start of 3 sec. after a standstill time of 7 days.
- High water alarm
- Forced switch-on with high water
- Potential-free fault signal (changeover contact) and potential-free operating signal (change-over contact)
- Integrated mains-dependent alarm buzzer
- Operation, high water and malfunction display via LEDs in the front panel
- Optional for control of explosion-protected pumps

Technical data:

Operating voltage: 1~230 V, 3~400 V, 3~230 V

Connected load P_2 : 2 x 4.0 kW

Maximum current: 2 x 12A

Frequency: 50/60 Hz

Protection class: IP 54

Dimensions (W x H x D): 300 x 230 x 113 mm

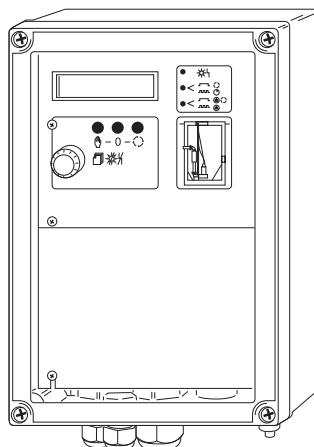

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. Ex-uncoupling relays are to be provided for pump control in potentially explosive areas.

Sewage Pumps for Building Services

Electrical accessories Wilo-Drain

Product descriptions

Switchgear Wilo-DrainControl PL 1

Switchgear for regulating the levels of 1 submersible motor pump. Level measurement can be carried out with either the bubbling-through or the dynamic pressure procedure, with float switches or electronic level sensors.

- LCD display
- LED for alarm, operation/follow-up time, manual/automatic operation
- Input terminals for connecting float switches (WA 65, WA 95 or MS1) or for connecting a level sensor **0-1 mWs** (4-20 mA)
- Potential-free contact for collective fault signal and high water alarm
- Forced switch-on of the pump
- Pump switch-off with follow-up time
- Integrated buzzer
- Operating hours counter, pump starts

Technical data:

Operating voltage: 1~230 V, 3~400 V

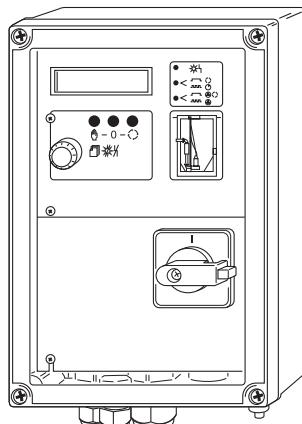

Frequency: 50/60 Hz

Protection class: IP 65 (within buildings/switch cabinets)

Dimensions (W x H x D): 180 x 255 x 180 mm

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. A level sensor in the Ex area (with breakdown barrier!) or a float switch (in the Ex area with Ex-uncoupling relay) is to be provided for pump control.

Switchgear Wilo-DrainControl PL 1 WS

Switchgear for regulating levels of 1 submersible motor pump in conjunction with the pumps stations Wilo-DrainLift WS... Level measurement can be carried out with either the bubbling-through or the dynamic pressure procedure, with float switches or electronic level sensors.

- LCD display
- LED for alarm, operation/follow-up time, manual/automatic operation
- Input terminals for connecting float switches (WA 65, WA 95 or MS1) or for connecting a level sensor **0-1 mWs** (4-20 mA)
- Potential-free contact for collective fault signal and high water alarm
- Forced switch-on of the pump
- Pump switch-off with follow-up time
- Integrated buzzer
- Operating hours counter, pump starts
- Lockable main switch
- 3~mains, no neutral conductor required

Technical data:

Operating voltage: 1~230 V, 3~400 V

Frequency: 50/60 Hz

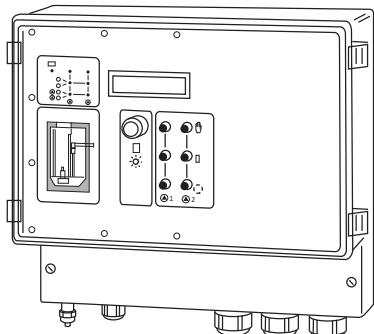

Protection class: IP 65 (within buildings/switch cabinets)

Dimensions (W x H x D): 180 x 255 x 180 mm

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. A level sensor in the Ex area (with breakdown barrier!) or a float switch (in the Ex area with Ex-uncoupling relay) is to be provided for pump control.

Product descriptions

Switchgear Wilo-DrainControl PL 2

Switchgear for regulating the levels of 2 submersible motor pumps. Level measurement can be carried out with either the bubbling-through or the dynamic pressure procedure, via an electronic level sensor **0-2.5 mWs** (4-20 mA) or float switch (WA 65, WA 95 or MS1).

- LCD display, multi-language switching
- LED for alarm, operation/follow-up time, manual/automatic operation
- Potential-free contact for collective fault signal and high water alarm, pump malfunction 1, pump malfunction 2
- Forced switch-on of the pump
- Pump switch-off with follow-up time
- Automatic fault-actuated switchover
- Integrated buzzer
- Operating hours counter, pump starts

Technical data:

Operating voltage: 1~230 V, 3~400 V

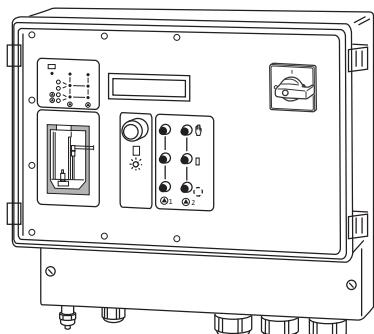

Frequency: 50/60 Hz

Protection class: IP 65 (within buildings/switch cabinets)

Dimensions (W x H x D): 320 x 300 x 120 mm

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. A level sensor in the Ex area (with breakdown barrier!) or a float switch (in the Ex area with Ex-uncoupling relay) is to be provided for pump control.

Switchgear Wilo-DrainControl PL 2 WS

Switchgear for regulating the levels of 2 submersible motor pumps.

Level measurement can be carried out with either the bubbling-through or the dynamic pressure procedure, via an electronic level sensor **0-1 mWs** (4-20 mA) or float switch (WA 65, WA 95 or MS1).

- LCD display, multi-language switching
- LED for alarm, operation/follow-up time, manual/automatic operation
- Potential-free contact for collective fault signal and high water alarm, pump malfunction 1, pump malfunction 2
- Forced switch-on of the pump
- Pump switch-off with follow-up time
- Automatic fault-actuated switchover
- Integrated buzzer
- Operating hours counter, pump starts
- Lockable main switch
- 3~mains, no neutral conductor required

Technical data:

Operating voltage: 1~230 V, 3~400 V

Frequency: 50/60 Hz

Protection class: IP 65 (within buildings/switch cabinets)

Dimensions (W x H x D): 320 x 300 x 120 mm

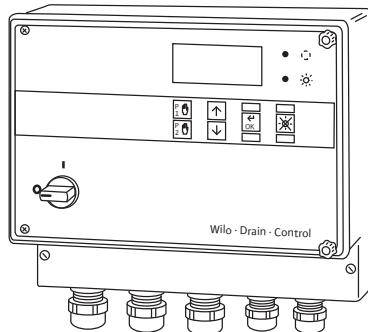

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. A level sensor in the Ex area (with breakdown barrier!) or a float switch (in the Ex area with Ex-uncoupling relay) is to be provided for pump control.

Sewage Pumps for Building Services

Electrical accessories Wilo-Drain

Product descriptions

Switchgear Wilo-DrainControl 1/2

Microprocessor-controlled switchgear for fully automatic control of 1 or 2 wastewater/submersible sewage pumps of the Wilo-Drain series

- Manual-0-automatic switch using membrane keyboard
- Two-line LCD-display with 2 x 16 x characters, multilingual, switchable, menu-driven operating feature via membrane keyboard
- Input terminals for connecting a level sensor
 - Standard: 0 – 2.5 mWs (4–20 mA)
 - Optional: 0 – 1 mWs (4–20 mA) or 0 – 5 mWs (4–20 mA)
- Input terminals for connecting the float switches WA 65, WA 95 or MS 1
- Automatic phase failure and rotating field control
- Operating hours counter
- Pump cycling (Control 2) after each pumping procedure
- Potential-free contacts for:
 - Collective fault signal
 - Signal horn (NO contact)
 - Operation pump 1 (NO contact)
 - Operation pump 2 (NO contact) only Control 2
- Main switch
- Integrated electronic motor current monitoring
- Maximum ambient temperature 40 °C
- Housing: Plastic for wall-mounted installation
- Starting mode: direct or star/delta

Technical data:

Operating voltage: 1~23 V, 3~400 V, 3~230 V

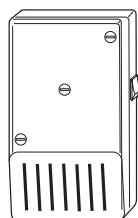

Frequency: 50 Hz

Protection class: IP 54

Dimensions (W x H x D): depends on model

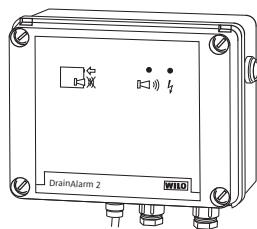

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas. A level sensor in the Ex area (with breakdown barrier!) or a float switch (in the Ex area with Ex-uncoupling relay) is to be provided for pump control.

Small alarm switchgear Wilo KAS

Small alarm switchgear with signalling tone 70 dBA, signal transmitter (electrode) with 3 m cable, self-charging power supply (battery backup approx. 5 h) in ISO plug housing (shockproof), protection class IP 30, 230 V~/9V=; 1.5 VA.

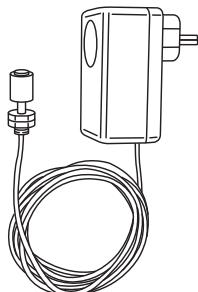

Wilo Drain-Alarm 2

Alarm switchgear for wall-mounted installation with optical and acoustical alarm signal (buzzer) 85 dBA self-charging power supply, potential-free contact, ISO housing, protection class IP 54, 1~230 V. A float switch of type WA is required as a transmitter.

Product descriptions

Alarm switchgears Wilo-AlarmControl 1/2

Wilo-AlarmControl 1:

Mains-independent alarm system with shockproof plug. Storage battery, acoustic alarm signal (buzzer), mini floater switch with 3 m cable mounted on the device. With potential-free contact and ISO housing IP 20.

Wilo-AlarmControl 2:

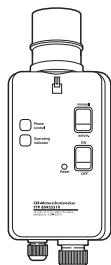

Mains-independent alarm system with shockproof plug and integrated outlet for connecting an appliance, e.g. a washing machine. Storage battery, acoustic alarm signal (buzzer), mini floater switch with 3 m cable mounted on the device. With insulated housing IP 20.

Technical data:

- Operating voltage: 1~230 V, 50 Hz
- Control voltage: 12 VDC (non-stabilised)
- Alarm contact with AlarmControl 1: potential-free normally open contact, contact load max. 1 A (230 VAC)
- Contact outlet: Contact load max. 16 A (250 VAC)
- Protection class: IP 20
- Housing: ABS
- Cable length mini-float switch: 3 m (2 x 0.75 mm²)
- Maximum ambient temperature: + 60 °C
- Dimensions (W x H x D): 68 x 112 x 53 mm

Note: Switchgears are not protected against explosions and may not be utilised except outside of potentially explosive areas.

Motor protection plug CEE

Motor protection switch (only up to a nominal motor power of $P_2 < 4 \text{ kW}$) with phase inverter and rotation direction indicator, thermal motor protection of the motor. Performance ranges:

- 2.6 – 3.7 A
- 3.7 – 5.5 A
- 5.5 – 8 A
- 8 – 11.5 A

Optional with TP 80, TP 100 assessment of thermal motor protection and leakage detection possible.

Level sensor

For level determination.

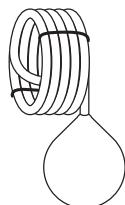

- Protection class 68
- Measurement range 0 – 1 mWS; 0 – 2.5 mWS
- Cable lengths 10, 30 or 50 m
- Output signal 4 – 20 mA
- ATEX-certified

Sewage Pumps for Building Services

Electrical accessories Wilo-Drain

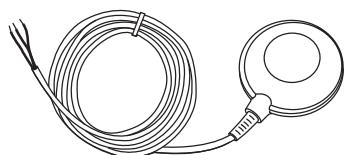

Product descriptions

Float switch MS1

Cable length 10 m, for sewage containing faeces, for connection to a Wilo-DrainControl 1 or 2.

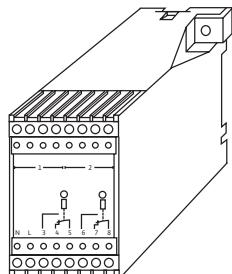

Float switch WA

Cable length 5 m, 10 m, 20 m, 30 m, switching: up ON/down OFF.

- WA 65 for fluids up to 60°C
- WA 95 for fluids up to 90°C

Ex-uncoupling relay

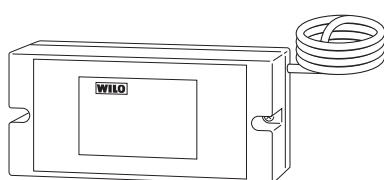

For the installation of float switches in potentially explosive areas.

Suitable for the connection of 2 to 5 float switches. Installed in an ISO housing, protection class IP 54, with transparent cover, for wall mounting.

Dimensions (W x H x D): 182 x 180 x 165 mm

- 2-circuit (connection of 2 float switches possible)
- 3-circuit (connection of 3 float switches possible)
- 4-circuit (connection of 4 float switches possible)
- 5-circuit (connection of 5 float switches possible)

Breakdown barrier

For the installation of a level sensor in potentially explosive areas.

Suitable for the connection of a level sensor.

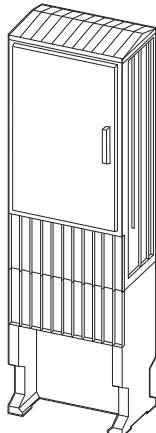

Protection class IP 40, housing for installation in non-explosive area.

Dimensions (W x H x D): 75 x 150 x 106 mm

1 m cable premounted.

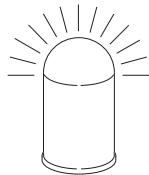

Product descriptions

Switch cabinet, outdoor installation for Wilo-DrainControl

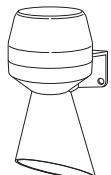

Empty housing for outdoor installation, made of fibreglass-reinforced polyester, with lock, provided with ventilation and exhaust. For pedestal mounting. Additional options such as ammeter, voltmeter, heating, etc. are available on request and can be immediately installed in the switch cabinet in conjunction with a Wilo-DrainControl if desired (additional charge). Dimensions (W x H x D): 590 x 875 x 320 mm

Flash light

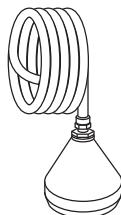

For installation on switch cabinets, outdoor installation, 230 VAC

Signal horn

For connection to Wilo-DrainControl, 230 VAC, 92 dBA

Dynamic pressure system

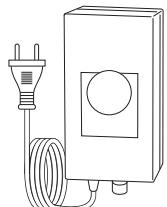

The pressure sensor (bell) detects changes in the fluid level in the shaft. The modifications of the pressure value in the bell is transmitted via a leak-proof hose to the Wilo-DrainControl switchgear and evaluated using measuring elements in the switchbox.
Scope of delivery: Submersion bell with 10 m hose

Sewage Pumps for Building Services

Electrical accessories Wilo-Drain

Product descriptions

Bubbling-through system

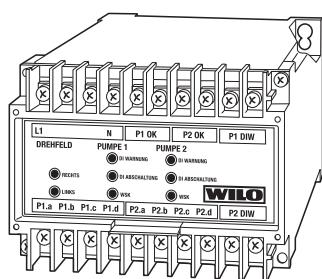

Dynamic pressure principle with compressed air permanently introduced by small compressor.

The submersion bell (dynamic pressure system) is to be ordered separately.

Scope of delivery: Small compressor 3 m hose with T-piece and flap trap

Tripping unit Wilo-SK 545

Tripping unit for monitoring max. 2 Wilo submersible motor-driven pumps TP 80, 100 or 150

- Installation in existing switchgears or as a module for switchgears of conventional design construction, installation on a 35 mm DIN rail
- Monitoring of the rotating field
- Leakage detection
- Thermal monitoring (TWC)
- Operational voltage 3~400 V max. 6 A fuse protection
- Potential-free output contacts max. load 250 V, 1 A
- Dimensions (W x H x D): 100 x 72 x 113 mm

Sewage Pumps for Municipal and Industrial Applications

Planning Guide

Sewage pumps of the Wilo EMU product family have a modular structure and can be adapted to different requirements.

Motors

The motor housings are made of grey cast iron. The bearings of the motor shaft are high-quality roller bearings. The motors are designed for insulation class "F" or "H". For especially high demands against corrosion, the motors can also be coated with Ceram, a liquid ceramic material.

Cooling

The motor cooling was realised in different ways. Depending on the construction, either oil, water/glycol or air is used as a heat carrier. Oil as well as water/glycol are cooled through a heat exchanger, which conducts the dissipated heat to the fluid. Air-filled T-motors give off heat directly to the environment via the housing.

Motor overview			
Motor	Coolant	Cooling and sealing system	Ex
F motor	Oil in the motor	2-chamber system with passive closed-circuit cooling	-
FK motor	Oil in the motor	2-chamber system with active closed-circuit cooling	-
FK 17.1 motor	Oil in the motor	2-chamber system with active closed-circuit cooling	•
FO motor	Oil in the motor	2-chamber system with passive closed-circuit cooling	-
FKT 27.1 motor	Dry motor with water/glycol mixture in the cooling circuit	2-chamber system with active closed-circuit cooling	•
FKT 49.../56... motor	Dry motor with oil in the cooling circuit	1-chamber system with active closed-circuit cooling	•
FKT 72 motor	Dry motor with oil in the cooling circuit	2-chamber system with active closed-circuit cooling	•
HC motor	Dry motor with water/glycol mixture in the hermetically sealed cooling circuit	2-chamber system with active closed-circuit cooling	•
T motor	Air	1-chamber system	•
T 20.1 motor	Air	1-chamber system	•

The motors with a closed-circuit cooling system can be operated both submerged and dry in permanent operation. T motors can be immersed in permanent operation, but can only be operated dry for a short time. Thus, high process reliability is ensured.

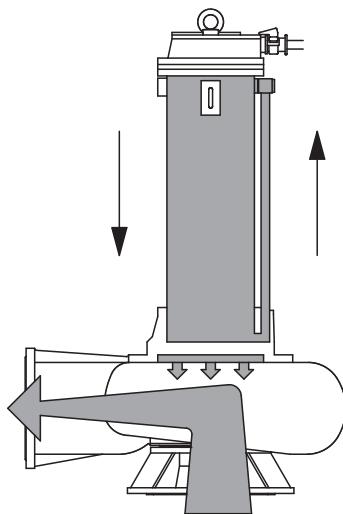

Figure: Motor with active closed-circuit cooling and 2-chamber system for wet and dry sump installation

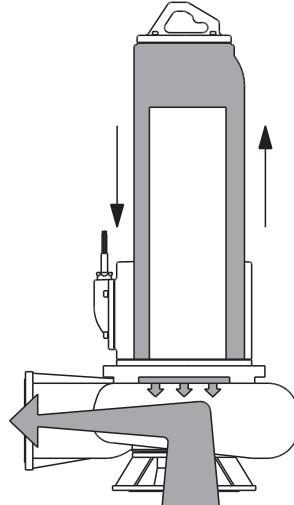

Figure: Motor with active closed-circuit cooling and 2-chamber system for wet and dry sump installation

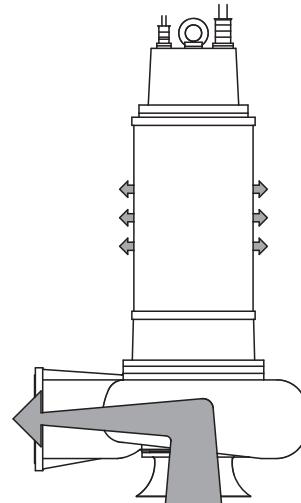

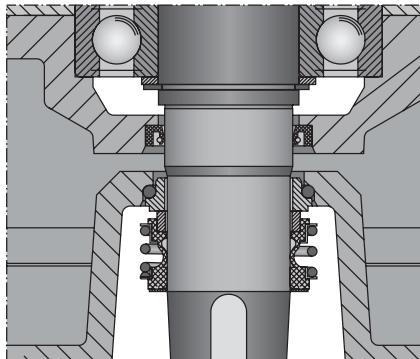

Figure: Dry motor for wet sump installation

Sealing systems

Each motor is equipped with a sealing housing in which there is a separate sealing chamber. This is between the fluid and the motor space and is filled with white oil. This chamber accommodates the leakage of the sealing on the fluid side.

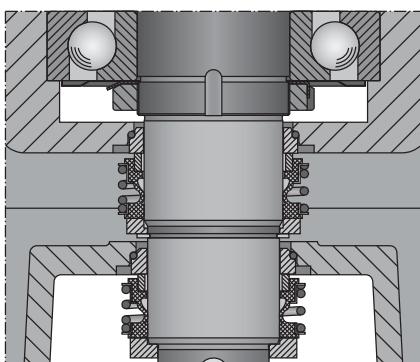

The sealing can be done in different ways and depends on the selected motor.

- Mechanical seal on the fluid side, special radial shaft seal on motor side

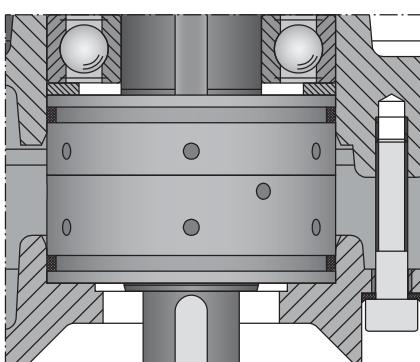

Basic sealing for normal applications

- Two mechanical seals

For high loads and difficult conditions for use

- Block seal cartridge

For high wear and corrosion resistance, as well as high operating safety

Monitoring equipment

All motors are equipped with bimetal or PTC temperature sensors. This prevents the motor from overheating.

Optionally, PT100 sensors can be used for monitoring the bearing temperature.

Furthermore, the motors can be designed with a monitor for the sealed space which could detect leakage in the sealing chamber.

Motors with a 2-chamber system are equipped with a separate leakage chamber. This is monitored by a float switch.

Hydraulics

The nominal widths of the hydraulics range from DN 32 to DN 600. The housing and impeller are manufactured from grey or stainless steel cast iron. For especially high demands against corrosion and abrasion, these components can be coated with Ceram, a liquid ceramic, or be manufactured from abrasite, a chilled cast iron material.

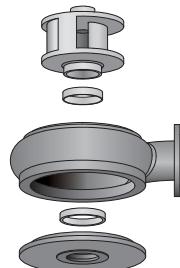

The hydraulics are equipped with a gap and counter ring. These exchangeable wear parts protect especially vulnerable places, such as the suction opening and impeller, and can be replaced inexpensively, as needed.

Impeller forms

The impeller form is to be chosen depending on the application as well as the composition of the fluid. The following impeller forms are available:

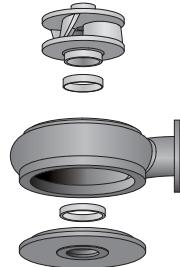

Single-channel impeller

- For the most part, insensitive to clogging
- Wide ball passage
- Low wear susceptibility
- Gentle pumping
- Power correction possible by trimming the impeller
- High degree of efficiency
- For solid matter concentrations up to 8% TS, depending on the type of sludge

Multi-channel impeller

- With 2, 3 or 4 channels
- Low wear susceptibility
- Gentle pumping
- Power correction possible by trimming the impeller
- High degree of efficiency

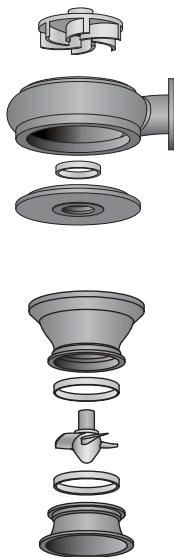

Sewage Pumps for Municipal and Industrial Applications

Planning Guide

Vortex impeller

- Minimum inclination to clogging
- Gap seals not required
- Suitable for some bubble-forming fluids
- Power correction possible by trimming the impeller
- Low efficiency
- For solid matter concentrations up to 8% TS, depending on the type of sludge

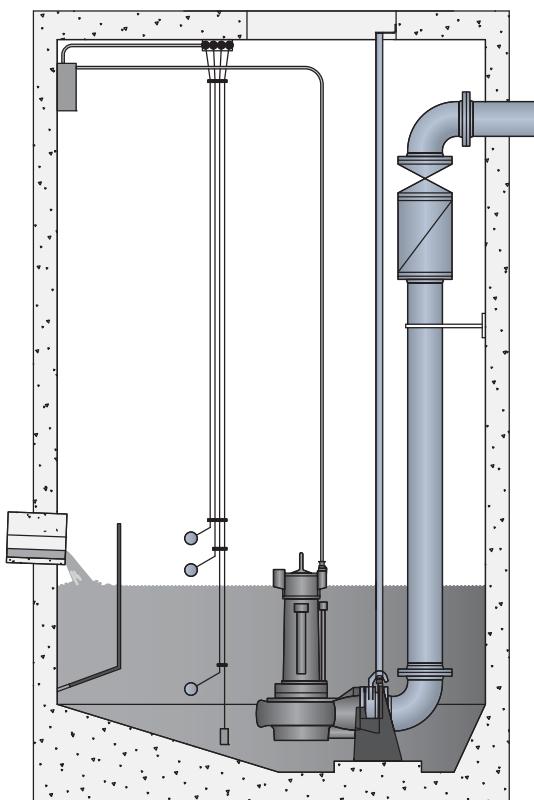

Propeller impeller

- For very high flows at low delivery head
- Only suitable for fluids with little contamination (e.g. for rainwater, return sludge, circulation of activated sludge, pumping stations, etc.)

Installation types

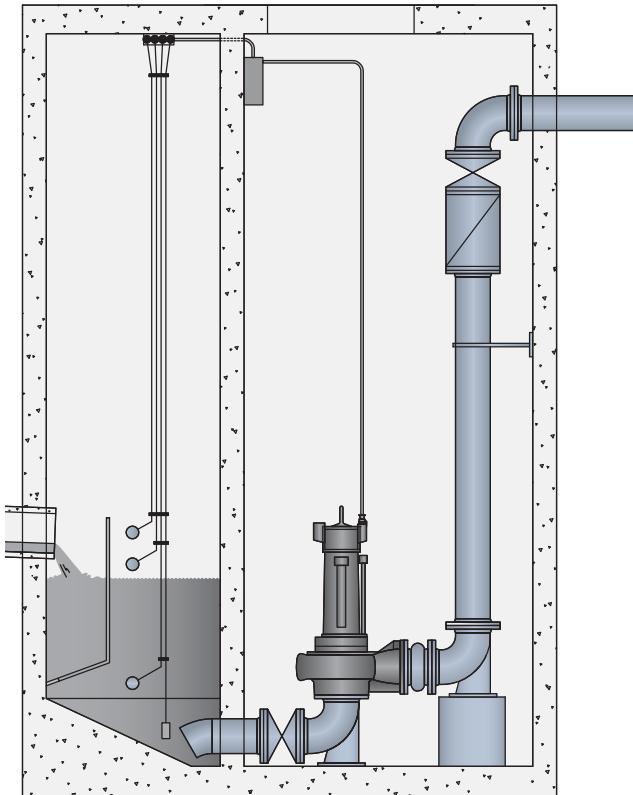

Fundamentally, three installation types are distinguished:

Wet sump installation

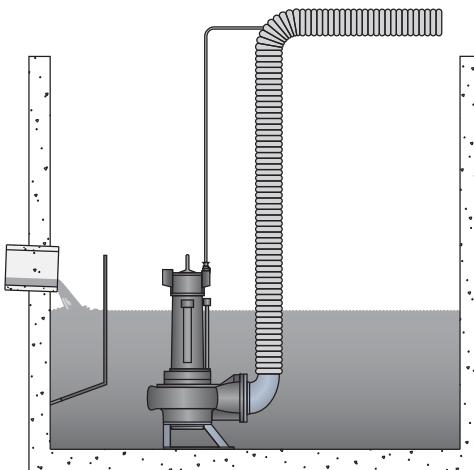

With the wet sump installation, the unit is surrounded by the fluid. The pump is connected to the existing pipeline system via a permanently installed suspension unit. By means of the associated lowering system, this can be lifted any time even when the shaft is full, or be lowered into the shaft.

Dry sump installation

In the case of dry sump installation, the operating space and collecting shaft are spatially separated. The pump is set up dry in the operating space, and is therefore accessible at all times. The fluid is fed through a suction line.

Portable installation

With the portable installation, the pump is equipped with a pedestal and can be flexibly put to use. Usually, these units are designed with a plug and/or switchgear. A bare cable end is also possible, however.

Operating modes

In general, our motors are designed for permanent operation at nominal power. Motors without closed-circuit cooling must be constantly immersed for this.

One refers to immersed operation when the pump is surrounded by the fluid up to the upper edge of the motor housing. As soon as the motor housing is taken out of the fluid, this is referred to as non-immersed operation.

S1 = Permanent operation

The motor temperature increases during operation until it reaches the operating temperature (thermal persistent state). The heat is dissipated during operation by means of coolant and/or the surrounding fluid. The machine can be operated without interruption while in this status. Specification of the installation type (dry/submerged) and/or of the installation is also to be taken into account. Permanent operation has no effect on this.

Please observe the service life specifications and/or running times per years in the respective documentation.

S2 = Short-term operation

The motor cannot be operated continuously when the power dissipation that is transformed into heat in the motor exceeds the heat dissipation capacity of the motor. The max. operating period is specified in minutes, e.g. S2-15. There must be a subsequent pause which lasts until the machine temperature does not deviate by more than 2K from the ambient temperature.

This operating mode is relevant for dry motor operation without closed-circuit cooling.

Vibrations and resonance

When sewage pumps are installed and connected, various aspects must be observed to guarantee smooth operation. Fundamentally, every moving machine part causes vibrations.

In the case of submersible motor pumps and monobloc pumps, during rotation, free centrifugal forces are generated at the circulation frequency. Also, the hydraulic forces acting on the pump impeller considerably contribute to the machine vibrations.

In order to avoid malfunctions and damage, the strength of the vibrations in the operating state may not exceed a certain threshold. This is achieved by statically and dynamically balancing the corresponding parts.

If the pumps are subject to additional external vibrations due to unfavourable installation and connections, these vibrations are superimposed. These vibrations can put high levels of stress on individual components.

In order for the pumps to work without disturbances and to have long service lives, they must be installed according to the generally valid rules of technology.

Q/H diagram

Several hydraulic pump curves are shown in the Q/H diagram. Every hydraulic pump curve (1) is allocated to an impeller diameter. Points (2) of maximum efficiency are marked in bold face on the pump curve. The dotted part of the curve (3) indicates the range in which the pump may not be operated.

The nominal power for each available motor is shown as a dotted power curve (4) in the Q/H diagram. Based on this curve, you can see which hydraulics can be combined with which motor and with how much power reserve the motor can be operated.

In general, the intersection point of the hydraulics curve with the power curve must always be to the right of the selected duty point. The more distance between the selected duty point and the intersection point of the curves, the more reserve the motor has.

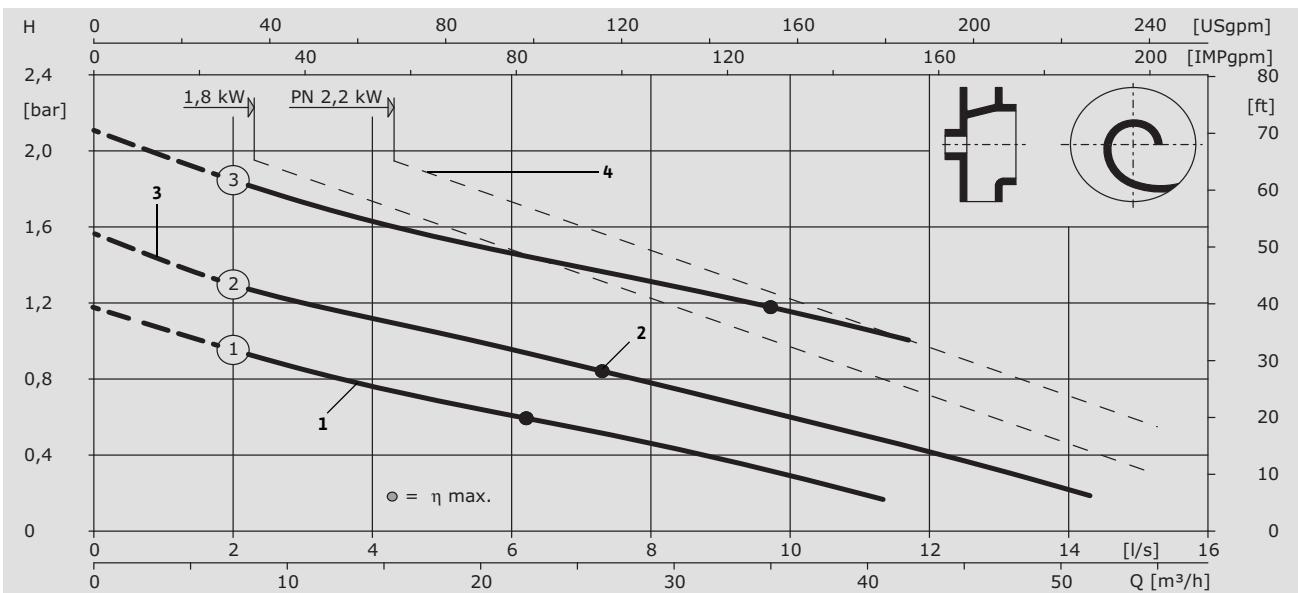

Figure: Q/H diagram

Sewage Pumps for Municipal and Industrial Applications

Planning Guide

Modern corrosion and abrasion protection

Units which come into contact with the fluid are subject both to highly corrosive as well as abrasive influences. For this, WILO offers its fluid ceramic coating, Ceram. This provides reliable protection against this type of stress.

Normal heavy corrosion protection methods, such as zinc dust priming with three coats of tar epoxy resin are so-called onion layer models. The advantage of the zinc dust priming is that the zinc dust sacrifices and the zinc carbonate can seal microscopic cracks. This is referred to as the self-healing effect of the coating. The disadvantage is that the wet adhesion of this zinc dust priming isn't very high. Because of the onion layer model of conventional solvent-containing coatings, the adhesive force depends on the quality of the individual layers.

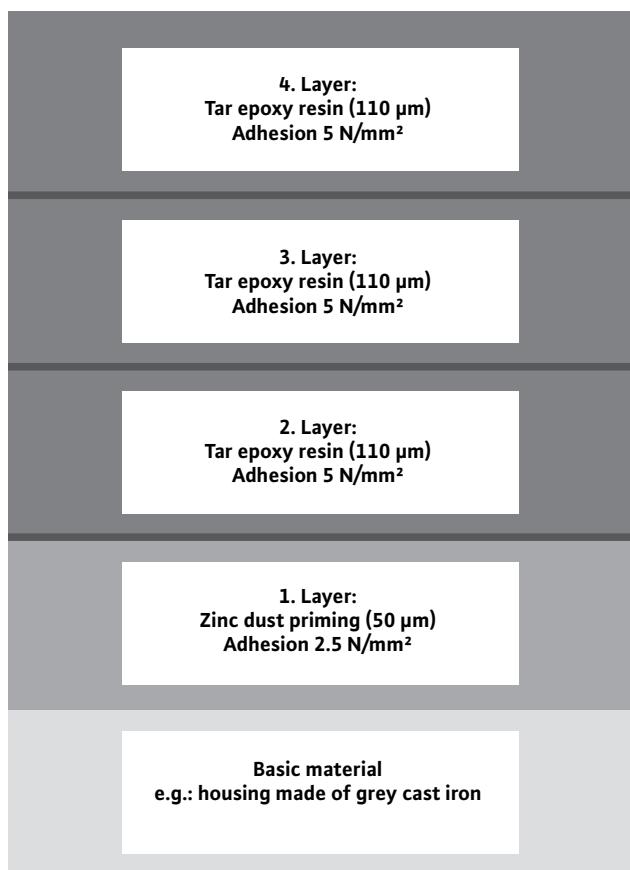

The Ceram coating, on the other hand, is based on the diamond model. It unifies the positive properties of two materials by combining ceramic particles in one polymer matrix.

The ceramic particles are enclosed in the matrix. Thus, there are no set breaking points and the adhesion is very high, e.g. in the case of Ceram C0 from 15 N/mm². Since Ceram is solvent-free, these coatings can be applied with one layer.

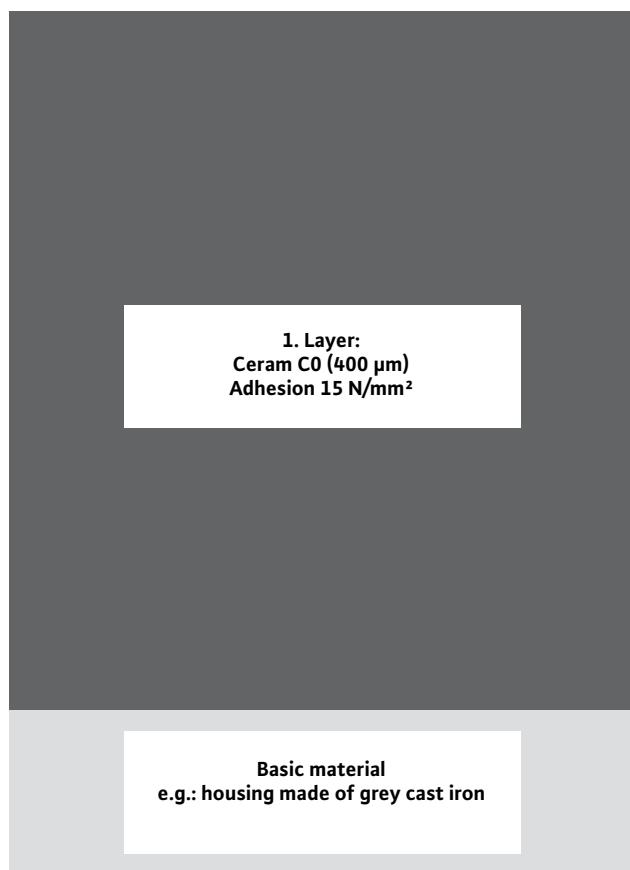

Ceram coatings are available in four quality levels. These distinguish themselves with regard to their durability against abrasive corrosion. While the corrosion resistance is very good for all four quality levels, the resistance to abrasion increases the higher the ordinal number (C0 = low protection from abrasion; C3 = very good protection from abrasion) of the coating, since coarser and coarser ceramic particles are processed. The individual layers get thicker and thicker and the mixture of large, medium-sized and small aluminium oxide particles is such that even in the case of abrasion with fine sand, the coatings are very stable.

The four Ceram qualities:

- Ceram C0: The coating is applied using the airless method in one layer of 0.4 mm.

The graphics show the structure of a tar epoxy resin coating with a zinc dust priming layer. The coating consists of 4 individual layers with a total coating thickness of 380 µm. The three dark grey lines represent the weak points of this coating. The black line is the intended breaking point.

The graphics show the structure of a Ceram C0 coating. The coating consists of individual layers with a total coating thickness of 400 µm. By applying it using the airless spraying method, a very high surface quality is achieved.

- Ceram C1: The coating is applied with a paintbrush and can consist of up to three coats. The layer thickness is then 1.5 mm.
- Ceram C2: The coating is applied with a spatula. The layer thickness is 1.5 mm and consists of one coat.
- Ceram C3: The coating is applied with a spatula. The layer thickness is 3 mm and consists of one coat. For tight gaps/play, a mechanical process is necessary.

For use in special fluids, the individual Ceram qualities can be combined with one another, e.g. C2+C1.

The Ceram coating is also very well suited for use in maritime environments. For its Ceram C0 coating, Wilo grants a warranty of 5 years for use in seawater. The precondition is that the coating is intact.

Increase efficiency, lower costs

Since water is being used more and more conservatively, there are more and more contaminants relative to the amount of water. This means that the concentration of corrosive and abrasive constituents is higher.

Sewage units are always exposed to this aggressive fluid. Corrosion and abrasion influence the surfaces and material structures of the units, sometimes with considerable impairments in the material, and thus also in the performance.

This significantly reduces the hydraulic efficiency. This results in the units having an increased current consumption. For another thing, the pumps no longer work at their optimum, the radial forces increase, there is more stress on the bearings and mechanical seals, and the service life of the machines goes down.

When standard materials are used, such as grey cast iron, under high stress, it may be necessary to exchange the components already after 500 hours of operation. Ceram coatings make it possible to prolong the service life by a factor of 4, and this at the same high efficiency, which means minimum energy costs.

When one considers the overall costs over the entire service life of the pump, the investment cost for a unit coated with Ceram, less than 10%, is negligible. Also, there is a high savings potential due to fewer necessary repairs, which means a lot fewer system downtimes. The amortisation is then usually quickly reached due to the higher efficiency.

Use of the various Ceram qualities

Ceram C0 is used for the complete outer and inner coating. It's excellently suited for corrosion protection.

Ceram C1 is used for the inner coating of pump components. The main area of use here is the impeller and suction piece coating.

Ceram C2 and C3 are used for the inner coating of pump components. The main area of use here is the coating of the pump housing.

In order to guarantee protection even in especially aggressive and corrosive fluids, the Ceram types are combined with each other, e.g. C2+C1 or C3+C1.

Sewage Pumps for Municipal and Industrial Applications

Planning Guide

Ceram C0 Technical data

Description

Ceram C0 is a sprayable, solvent-free two-component polymer coating substance with a ceramic basis for protecting our products against corrosion when there is additional strong mechanical stress.

Composition

Solvent-free epoxy polymer with solvent-free polyamine hardener and various extenders.

Properties

- Tough and durable coating with high mechanical and chemical resistance and very good abrasion strength.
- Excellent wet adhesion and compatibility with cathodic corrosion protection as single-layer coating on steel surfaces.
- Very good adhesion to steel surfaces.
- Replaces tar-containing coatings.
- Cost-saving due to the long service life, low maintenance and easy reparability.
- Tested by the "Bundesanstalt für Wasserbau" (Federal Institute for Hydraulic Engineering) (BAW).
- Solvent-free.
- Hardened coating has a high-gloss finish.

Ceram C1 Technical data

Description

Ceram C1 is a cold-hardening, solvent-free ceramic compound material based on two components with selected reinforcement fillers and extenders.

Composition

Polymer/ceramic compound material made of a matrix and reinforcement.

Matrix: A modified polymer made up of two parts with an aliphatic hardening agent.

Reinforcement: A mixture (protected by proprietary rights) made up of aluminium oxide and extenders.

This ceramic mixture has excellent abrasion strength and can be applied very easily.

Properties

- The completely hardened Ceram coating C1 has a glossy finish, has no pores and is easy to clean, mechanically very stable, abrasion-proof and has excellent adhesion.
- Ceram C1 hardens without shrinking and is stable against a large number of chemicals, oils, greases, solvents, diluted organic and inorganic acids and bases and saline solutions.
- Ceram C1 reduces friction and improves flow and efficiency.
- Excellent corrosion protection.

Sewage Pumps for Municipal and Industrial Applications

Planning Guide

Ceram C2 Technical data

Description

Ceram C2 is a high-performance ceramic compound material for repairing and protecting all metal surfaces which are subject to abrasion, corrosion, cavitation and chemical exposure. Ceram C2 is applied with a coating thickness of 1.5 mm. It does not shrink and consists of almost 100% solids. Ceram C2 contains a high percentage of carbides for use under extremely abrasive operating conditions which involve complex and expensive repair measures. The material can either be used for restoring abraded metal surfaces or as a preventive coating which is superior to the original metal with regard to abrasive strength. Ceram C2 can be used instead of metal application, tiles, rubber fillers, etc. The thermal load capacity is outstanding.

Composition

Polymer/ceramic compound material made of a base compound and reinforcement.

Matrix: A modified polymer made up of two parts with an aliphatic hardening agent.

Reinforcement: A mixture (protected by proprietary rights) made up of aluminium oxide and silicon carbide particles.

This ceramic mixture has excellent abrasion strength and can be applied very easily.

Properties

Excellent abrasion resistance ensures long operation and usually lasts longer than a welded-on metal coating. Can be easily moulded to any metal surface.

Its tough synthetic resin structure resists temperature shocks and impacts.

Excellent adhesion ensures reliability and prevents stripping.

Simple application reduces work expenses and downtimes.

Withstands chemically varying operating conditions when metals fail.

Practical 4:1 weight and volume mixture ratio.

Sewage Pumps for Municipal and Industrial Applications

Planning Guide

Wilo submersible mixers and re-circulation pumps are approved for use in potentially explosive areas. For this, the units are certified according to two different standards: The European ATEX standard as well as the American FM standard.

Atex standard

The units are constructed according to the "EU directive 94/09/EG" (ATEX 95) and the European standards DIN EN 60079-0, EN 60079-1. They may be operated in potentially explosive atmospheres which require electrical devices of device group II, category 2.

Thus, use in zone 1 and zone 2 is possible. These units may not be used in zone 0.

Wilo submersible mixers and re-circulation pumps are characterised as follows: II 2 G Ex d IIB T4

- II = Device group II

Meaning: Meant for potentially explosive locations except for mines

- 2 = Category

- G = Substance group

Meaning: Gases

- Ex = Ex-protected device in acc. with European standard

- d = Ignition protection class, motor housing

Meaning: Pressure-proof enclosure

- IIB = Explosion group

Meaning: For use together with gases of subdivision B, all gases except for H₂, C₂H₂, CS₂

- T4 = Temperature class

Meaning: Max. surface temperature of the device is 135°C

FM standard

The units are certified and approved by the recognised testing and approval authority "FM Approvals" in accordance with the standards FM 3600, 3615, 3615.80 and ANSI/UL-1004. They may be operated in potentially explosive areas which require electrical devices with the protection class "explosion-proof, class 1, division 1". Thus, operation in areas with the required protection class "explosion-proof, class 1, division 2" according to the FM standard is also possible.

Wilo submersible mixers and re-circulation pumps are characterised as follows:

Class 1; Division 1; Groups C, D

Class 2; Division 1; Groups E, F, G

Class 3

T3C

- Class 1; Division 1; Groups C, D

Meaning: Gases, vapours, mists; explosive atmosphere present constantly or occasionally during normal conditions; gas groups: Ethylene (C), propane (D)

- Class 2; Division 1; Groups E, F, G

Meaning: Dusts; Explosive atmosphere present constantly or occasionally during normal conditions; dust groups: Metal (E), carbon (F), grain (G)

- Class 3

Meaning: Fibres and lint

- T3C = Temperature class

Meaning: Max. surface temperature of the machine 160°C

Temperature monitoring

Standard explosion-certified motors are equipped with a temperature monitor. This includes:

- Motors of size T 12 and T 13

Winding: Temperature limiter 140°C

- Motors of size T 17 and T 20

Temperature controller 130°C, temperature limiter 140°C

The temperature monitor is to be connected so that automatic reactivation can occur when the "temperature controller" is triggered. When the "temperature limiter" is triggered, the reactivation should only be possible when the "release button" has been pressed by hand.

Frequency converter operation

For operation with a frequency converter, the motors must be equipped with a PTC thermistor temperature sensor. Specify the intended use when making your order so that we can equip the motors accordingly.

Sealing chamber control

The units can be equipped with external sealing chamber control. This can also be installed later. If the unit is equipped with an external sealing chamber control, this may only be connected to an intrinsically safe electric circuit.

Definition of the Ex zones

The Ex zones are defined in the respective standards. The marking of zones in the operating area of the units must be done by the operator. When ordering, indicate which Ex standard you are using as a basis and in which zone you want to operate the unit.

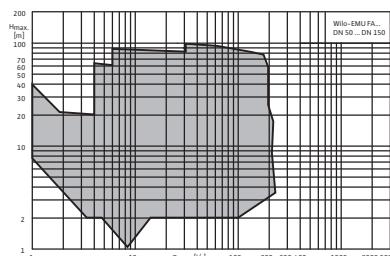

Sewage Pumps for Municipal and Industrial Applications

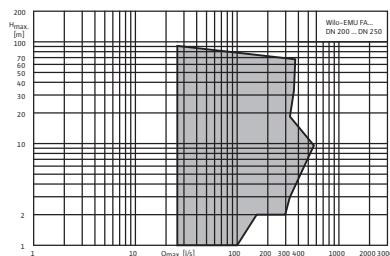

Submersible motor pumps from DN 50 to DN 600

Series overview Wilo EMU FA...

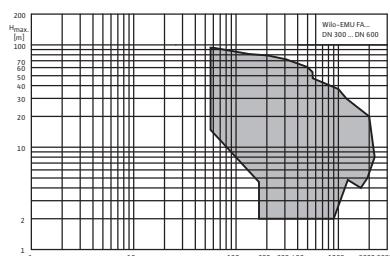

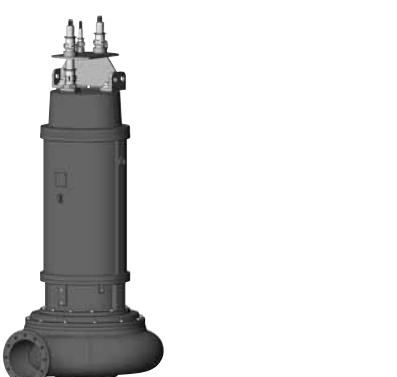

Series: Wilo EMU FA 05... to Wilo EMU FA 15...

Series: Wilo EMU FA 20... to Wilo EMU FA 25...

Series: Wilo EMU FA 30... to Wilo EMU FA 60...

Sewage pump with submersible motor

Application

- Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas

Sewage pump with submersible motor

Application

- Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas

Sewage pump with submersible motor

Application

- Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas

Series overview Wilo EMU FA...

Series: Wilo EMU FA 05... to Wilo EMU FA 15...

> Product advantages:

- Pumps for wet and dry sump installation
- Explosion-protected versions in accordance with ATEX and FM
- Longitudinally watertight cable inlet
- Heavy sturdy version made of grey cast iron for long trouble-free operation
- Special materials and coatings against corrosive or abrasive fluids

> Additional information:

Sewage Pumps for Municipal and Industrial Applications

Submersible motor pumps from DN 50 to DN 150

Series description Wilo-EMU FA 05... to FA 15...

Wilo-EMU FA...

Seage pump with submersible motor

Type key for hydraulics

Example: Wilo-EMU FA 08.34E

FA = Submersible sewage pump

08 = Nominal width of the pressure port DN 80 (x10)

34 = Performance characteristic number

E = Impeller type

Type key for motors

Example: Wilo-EMU T17.2-4/24K Ex

T = Motor version

17 = Size

2 = Distinguishing number

4 = Number of poles

24 = Package length

K = Seal version

Ex = Ex approval

Fields of application

Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas

Construction

Submersible sewage pump as submersible monobloc unit for wet and dry sump installation. Portable installations are usually possible.

Hydraulics

Housing and impeller made of grey cast iron. The outlets on the pressure side are designed as horizontal flange connections (exception: FA 05.11 and FA 05.33). The maximum possible dry substance content, depending on the hydraulics and impeller type, is 8%. The ball passages are between 35 and 130 mm.

Different impeller shapes are used:

- W = Vortex impeller
- E = Single-channel impeller
- Z = Two-channel impeller
- D = Three-channel impeller

The hydraulics are equipped with a counter ring and stationary wear ring made of hardened materials (exception: vortex impellers and FA 08.41). These easy-to-exchange wear parts ensure long-term efficiency of the unit.

Motor

Motor housing made of grey cast iron. Depending on the type of motor, the unit can run continuously in wet or dry sump installation.

The air-filled motors (T) give off their heat to the surrounding fluid and can therefore only be operated continuously outside of the fluid in an exceptional case. The operating mode is documented here specific to type.

The self-cooling motors (F, FK, FO, FKT, HC) give off their heat directly to the pumped fluid via a built-in heat exchanger. They are suitable for permanent operation either submerged or surfaced.

The cable inlet is sealed longitudinally watertight in connection with the T-cable inlet. Up to the motor size 17, the cable lengths are available in fixed stages starting from 10 m. Starting from size 20, the cable length can be individually configured.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

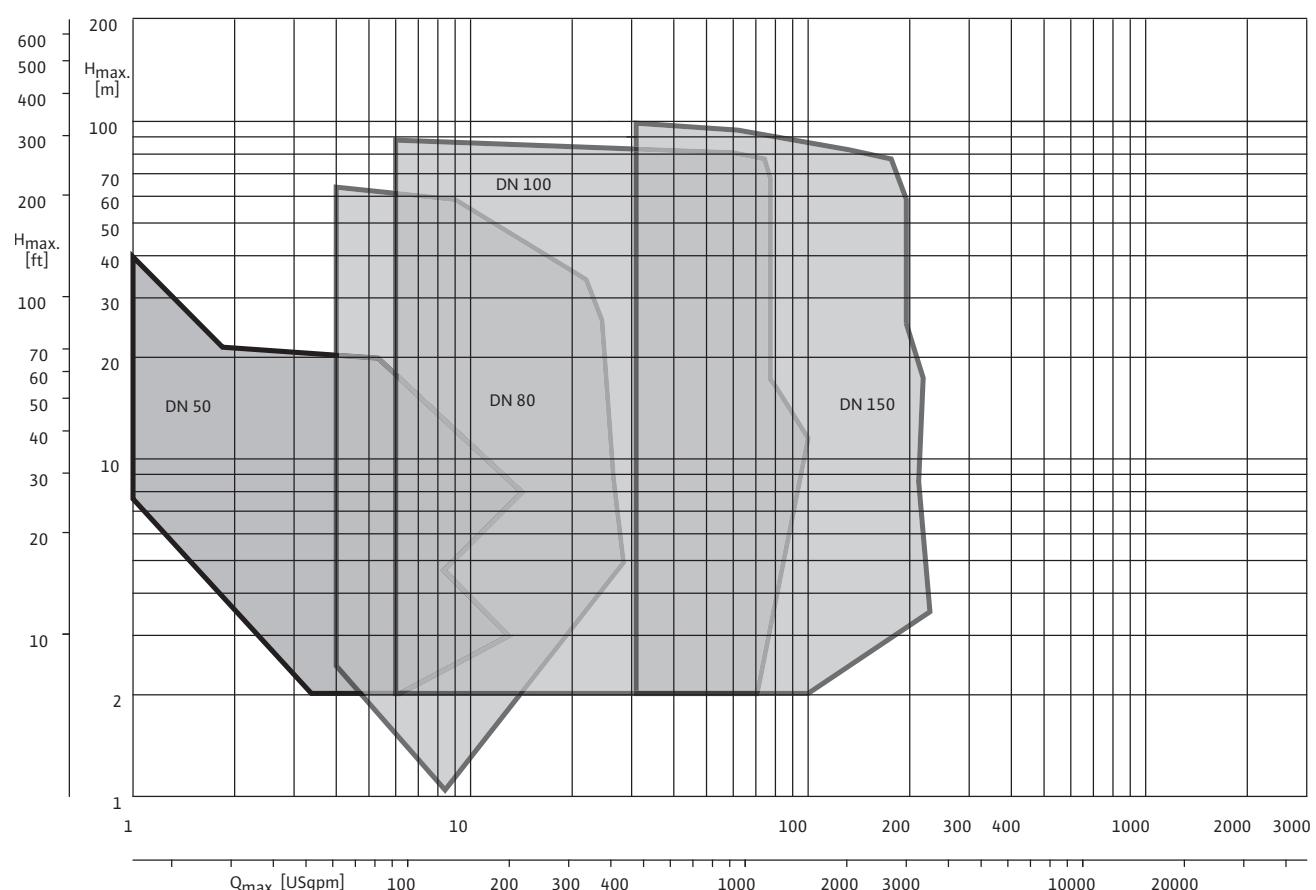

- On the fluid side with a mechanical seal, on motor side with a radial shaft sealing ring (version H)
- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Special materials and coatings against corrosion and abrasion
- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Plugs and switchgear
- Level controls

Series description Wilo-EMU FA 05... to FA 15...

Sewage Pumps for Municipal and Industrial Applications

Submersible motor pumps from DN 200 to DN 250

Series description Wilo-EMU FA 20... to FA 25...

Wilo-EMU FA...

Seage pump with submersible motor

Type key for hydraulics

Example: Wilo-EMU FA 20.54E

FA = Submersible sewage pump

20 = Nominal width of the pressure port DN 200 (x10)

54 = Performance characteristic number

E = Impeller type

Type key for motors

Example: Wilo-EMU FK17.1-6/16K Ex

FK = Motor version

17 = Size

1 = Distinguishing number

6 = Number of poles

16 = Package length

K = Seal version

Ex = Ex approval

Fields of application

Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas.

Construction

Submersible sewage pump as submersible monobloc unit for wet and dry sump installation. Portable installations are usually possible.

Hydraulics

Housing and impeller made of grey cast iron. The outlets on the pressure side are designed as horizontal flange connections. The maximum possible dry substance content, depending on the hydraulics and impeller type, is 8%. The ball passages are between 80 and 200 mm.

Different impeller shapes are used:

- E = Single-channel impeller
- Z = Two-channel impeller
- D = Three-channel impeller

The hydraulics are equipped with a counter ring and stationary wear ring made of hardened materials. These easily exchangeable wear parts guarantee long-term efficiency of the unit.

Motor

Motor housing made of grey cast iron. Depending on the type of motor, the unit can run continuously in wet or dry sump installation. The air-filled motors (T) give off their heat to the surrounding fluid and can therefore not be operated continuously outside of the fluid.

The self-cooling motors (F, FK, FO, FKT, HC) give off their heat directly to the pumped fluid via a built-in heat exchanger. They are suitable for permanent operation either submerged or surfaced.

The cable inlet is sealed longitudinally watertight in connection with the T-cable inlet. Up to the motor size 17 the cable lengths are available in fixed stages starting from 10 m. Starting from size 20 the cable length can be individually configured.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

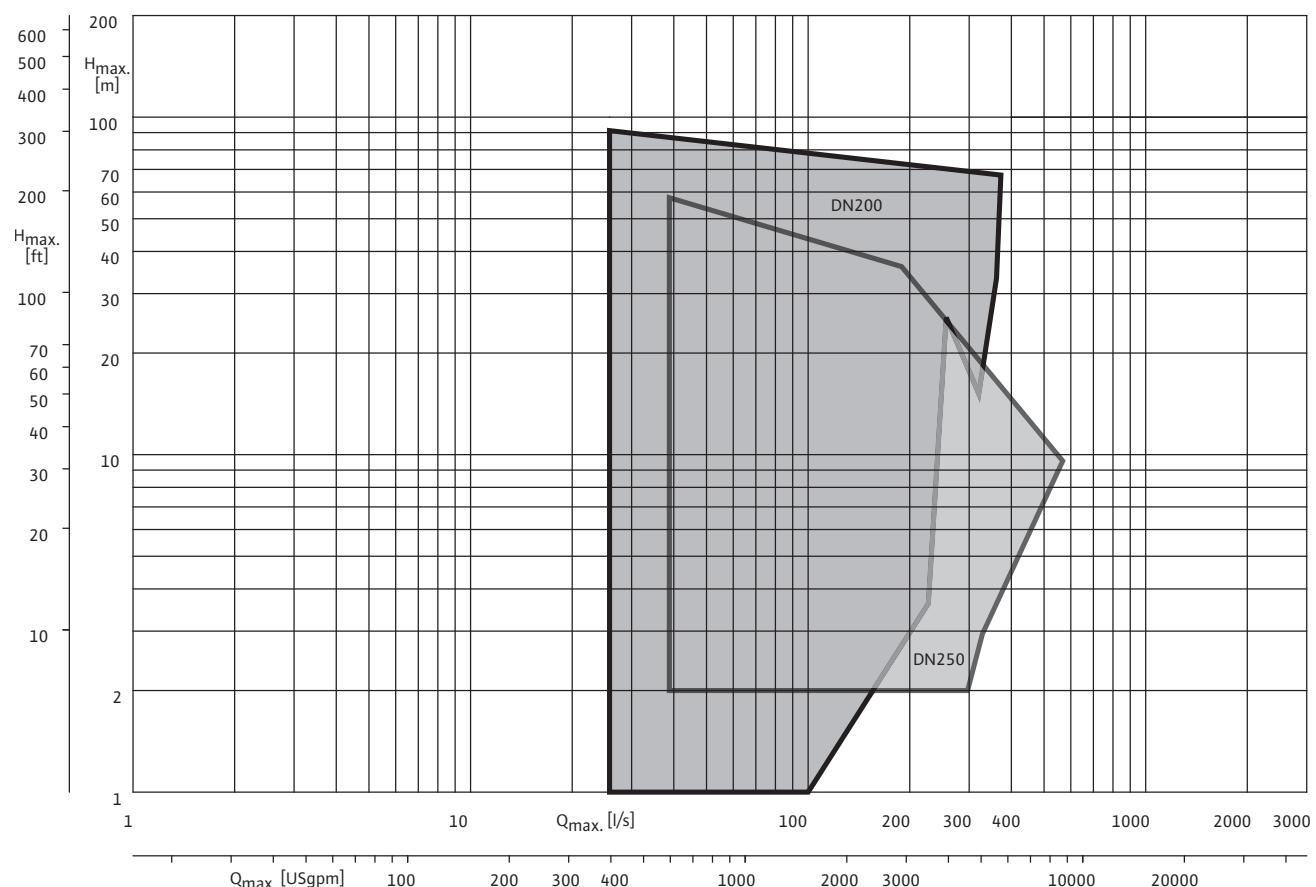

- On the fluid side with a mechanical seal, on motor side with a radial shaft sealing ring (version H)
- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Special materials and coatings against corrosion and abrasion
- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Plugs and switchgear
- Level controls

Sewage Pumps for Municipal and Industrial Applications

Submersible motor pumps from DN 300 to DN 600

Series description Wilo-EMU FA 30... to FA 60...

Wilo-EMU FA...

Sewage pump with submersible motor

Type key for hydraulics

Example: Wilo-EMU FA 60.83V

FA = Submersible sewage pump

60 = Nominal width of the pressure port DN 600 (x10)

83 = Performance characteristic number

V = Impeller type

Type key for motors

Example: Wilo-EMU T56-8/70G Ex

T = Motor version

56 = Size

8 = Number of poles

70 = Package length

G = Sealing version

Ex = Ex approval

Fields of application

Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas.

Construction

Submersible sewage pump as submersible monobloc unit for wet and dry sump installation.

Hydraulics

Housing and impeller made of grey cast iron. The outlets on the pressure side are designed as horizontal flange connections. The maximum possible dry substance content, depending on the hydraulics and impeller type, is 8%. The ball passages are between 80 and 170 mm.

Different impeller shapes are used:

- **Z** = Two-channel impeller
- **D** = Three-channel impeller
- **V** = Four-channel impeller

The hydraulics are equipped with a counter ring and stationary wear ring made of hardened materials. These easily exchangeable wear parts guarantee long-term efficiency of the unit.

Motor

Motor housing made of grey cast iron. Depending on the type of motor, the unit can run continuously in wet or dry sump installation.

The air-filled motors (T) give off their heat to the surrounding fluid and can therefore not be operated continuously outside of the fluid.

The self-cooling motors (F, FK, FO, FKT, HC) give off their heat directly to the pumped fluid via a built-in heat exchanger. They are suitable for permanent operation either submerged or surfaced.

The cable inlet is sealed longitudinally watertight in connection with the T-cable inlet. The cable length can be individually configured.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

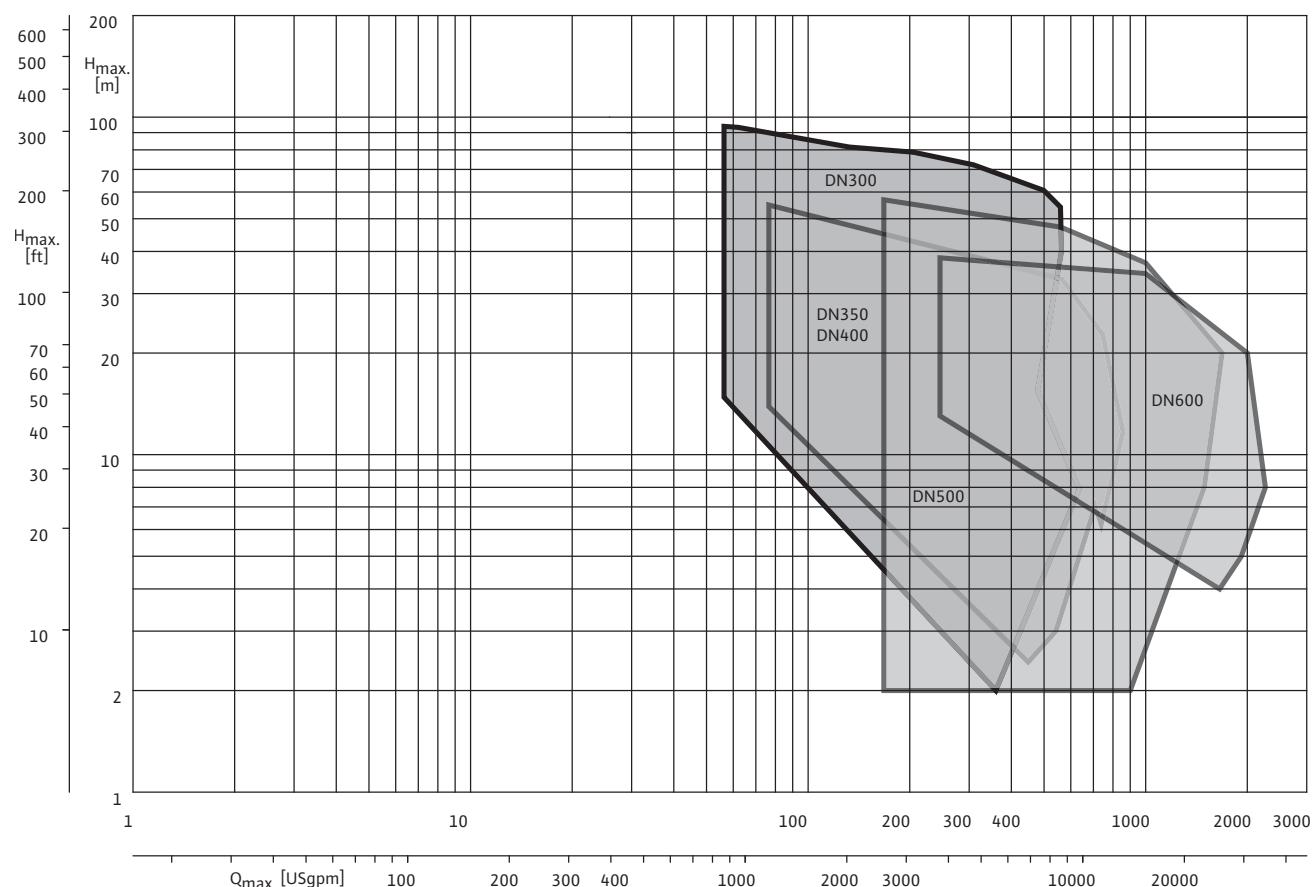

- On the fluid side with a mechanical seal, on motor side with a radial shaft sealing ring (version H)
- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Special materials and coatings against corrosion and abrasion
- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Switchgears
- Level controls

Series description Wilo-EMU FA 30... to FA 60...

Propeller Pumps for Use in Pipe
Shafts

Pumps for Special Applications

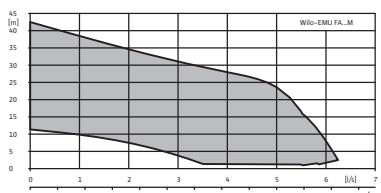

Submersible motor pumps from DN 36 to DN 800

Series overview Wilo EMU FA...WR, FA...M, FA...RF, KPR...

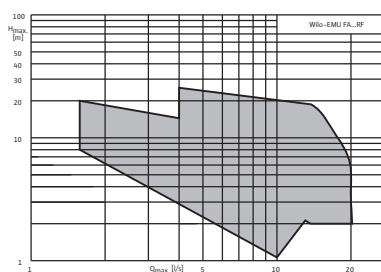

Series: Wilo EMU FA...WR

Series: Wilo EMU FA...M

Series: Wilo EMU FA...RF

Sewage pump with submersible motor and mechanical stirring apparatus

Application

- Pumping of sewage with solid matter in pumping stations, water treatment systems, as well as in industrial and commercial areas

Sewage pump with submersible motor and macerator

Application

- Pumping of sewage with solid constituents in pumping stations as well as for pressurised drainage

Sewage pump with submersible motor made of stainless steel casting

Application

- Pumping of chemically aggressive sewage and process water in the industrial and commercial areas

Pumps for Special Applications

Submersible motor pumps from DN 36 to DN 800

Series overview Wilo EMU FA...WR, FA...M, FA...RF, KPR...

Series: Wilo EMU FA...WR

> Product advantages:

- Pumps for wet sump and portable installation
- Explosion-protected versions in accordance with ATEX and FM
- Longitudinally watertight cable inlet
- Heavy sturdy version made of grey cast iron for long trouble-free operation
- Special materials and coatings against corrosive or abrasive fluids
- Avoidance of deposits in the suction area of the pump

> Additional information:	Page

Pumps for Special Applications

Submersible motor pumps from DN 36 to DN 800

Series overview Wilo EMU FA...WR, FA...M, FA...RF, KPR...

Series: Wilo EMU KPR...

Propeller pump with submersible motor for use in pipe sumps

Application

- Pumping of industrial water and mechanically pre-cleaned sewage in the industrial and municipal areas

Pumps for Special Applications

Submersible motor pumps from DN 36 to DN 800

Series overview Wilo EMU FA...WR, FA...M, FA...RF, KPR...

Series: Wilo EMU KPR...

> Product advantages:

- Explosion-protected versions in accordance with ATEX and FM
- Longitudinally watertight cable inlet
- Heavy sturdy version made of grey cast iron for long trouble-free operation
- Coatings against corrosive or abrasive media

Pumps for Special Applications

Submersible motor pumps with mechanical stirring apparatus

Series description Wilo-EMU FA...WR

Wilo-EMU FA...WR

Sewage pump with submersible motor and mechanical stirring apparatus

Type key for hydraulics

Example: Wilo-EMU FA 08.52WR

FA = Submersible sewage pump

08 = Nominal width of the pressure port DN 80 (x10)

52 = Performance characteristic number

W = Vortex impeller

R = Mixer head

Type key for motors

Example: Wilo-EMU T17-6/16H Ex

T = Motor version

17 = Size

6 = Number of poles

16 = Package length

H = Seal version

Ex = Ex approval

Fields of application

Pumping of sewage with sand and gravel content, as well as in the industrial and commercial areas.

Construction

Submersible sewage pump with mechanical stirring apparatus as submersible monobloc unit for wet sump and portable installation.

Hydraulics

Housing and impeller made of grey cast iron. The outlets on the pressure side are designed as horizontal flange connections. The ball passages are between 23 and 58 mm. Only vortex impellers are used, on which a mechanical stirring apparatus with a mixer head is attached, made of the chilled cast iron material abrasite. This is attached as an axial extension of the motor shaft.

Motor

Motor housing made of grey cast iron. Depending on the type of motor, the unit can run continuously in wet sump installation or portable installation.

The air-filled motors (T) give off their heat to the surrounding fluid and can therefore only be operated continuously outside of the fluid in an exceptional case. The operating mode is documented here specific to type.

The self-cooling motors (F, FO, FK, FKT, HC) give off their heat directly to the pumped fluid via a built-in heat exchanger. They are suitable for permanent operation either submerged or surfaced.

The cable inlet is sealed longitudinally watertight in connection with the T-cable inlet. Up to the size 17 the cable lengths are available in fixed stages starting from 10 m. Starting from size 20 the cable length can be individually configured.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

- On the fluid side with a mechanical seal, on motor side with a radial shaft sealing ring (version H)
- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Special materials and coatings against corrosion and abrasion
- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Plugs and switchgear
- Level controls

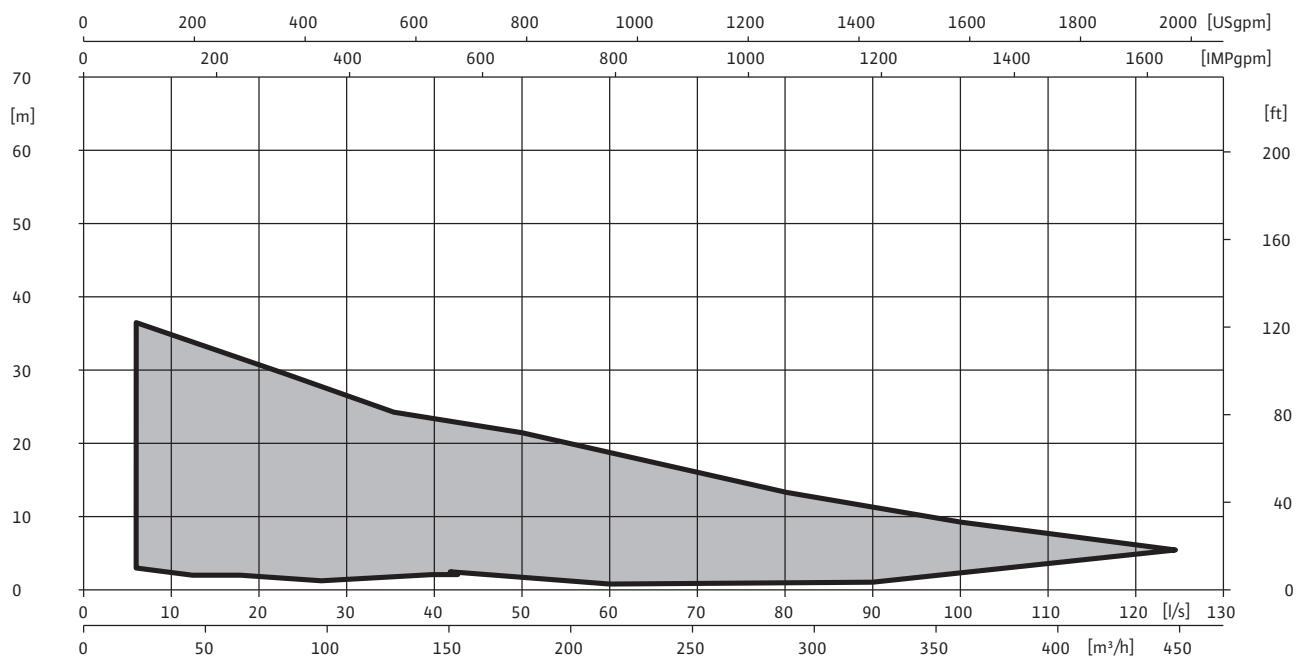

Pumps for Special Applications

Pumps for Special Applications

Submersible motor pumps with macerator

Series description Wilo-EMU FA...M

Wilo-EMU FA...M

Sewage pump with submersible motor and macerator

Type key for hydraulics

Example: Wilo-EMU FA 03.13M

FA = Submersible sewage pump

03 = Nominal width of the pressure port DN 36

13 = Performance characteristic number

M = Macerator

Type key for motors

Example: Wilo-EMU T12-2/11G Ex

T = Motor version

12 = Size

2 = Number of poles

11 = Package length

G = Sealing version

Ex = Ex approval

Fields of application

Sewage pump with macerator for pressurised drainage with long small-dimensioned pressure pipes. The upstream macerator system cuts up the admixtures in sewage to the required size.

Construction

Submersible sewage pump with macerator as submersible monobloc unit for wet sump installation and portable installation.

Hydraulics

Housing and impeller made of grey cast iron. Adjustable macerator made of the chilled cast iron abrasite. The outlets on the pressure side are designed as horizontal flange connections. The ball passages are 6 mm.

Motor

Motor housing made of grey cast iron.

The air-filled T-motors give off their heat to the surrounding fluid and can therefore only be operated continuously outside of the fluid in an exceptional case. The operating mode is documented here specific to type.

The cable inlet is sealed longitudinally watertight. Cable lengths are available at fixed stages starting from 5 m.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

- On the fluid side with a mechanical seal, on motor side with a radial shaft sealing ring (version H)
- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Coatings against corrosion
- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Plugs and switchgear
- Level controls

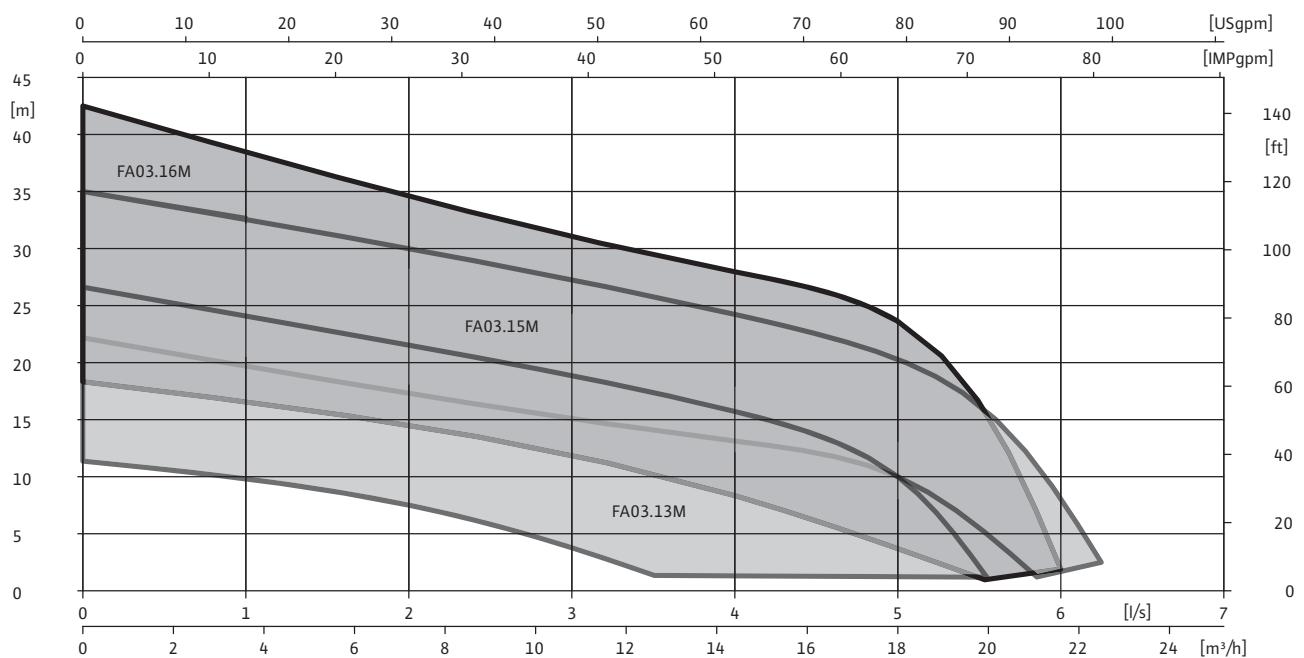

Pumps for Special Applications

Submersible motor pumps made of stainless steel casting

Series description Wilo-EMU FA...RF

Wilo-EMU FA...RF

Seage pump with submersible motor made of stainless steel casting

Type key for hydraulics

Example: Wilo-EMU FA 05.23RFW

FA = Submersible sewage pump

05 = Nominal width of the pressure port DN 50 (x10)

23 = Performance characteristic number

RF = Special material, stainless steel casting

W = Impeller type

Type key for motors

Example: Wilo-EMU T12-2/11G Ex

T = Motor version

12 = Size

2 = Number of poles

11 = Package length

G = Sealing version

Ex = Ex approval

Fields of application

Seage pumps for pumping aggressive fluids. All parts coming into contact with this have rust-proof stainless steel quality V4A (AISI 316). As standard with protective hose and elastomers made of Viton.

Construction

Submersible sewage pump made of rust-proof stainless steel as submersible monobloc unit for wet sump installation and portable installation.

Hydraulics

Housing and impeller made of stainless steel cast iron. The outlets on the pressure side are designed as horizontal flange connections. The maximum possible dry substance content, depending on the hydraulics and impeller type, is 8%. The ball passages are between 35 and 45 mm.

Different impeller shapes are used:

- W = Vortex impeller
- E = Single-channel impeller

The hydraulics are equipped with counter rings (single-channel impellers only) and stationary wear rings made of hardened materials. These easily exchangeable wear parts guarantee long-term efficiency of the unit.

Motor

Motor housing made of stainless steel cast iron.

The air-filled T-motors give off their heat to the surrounding fluid and can therefore only be operated for a short time outside of the fluid. The operating mode is documented here specific to type.

The cable inlet is sealed longitudinally watertight. Cable lengths are available at fixed stages starting from 10 m.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Plugs and switchgear
- Level controls

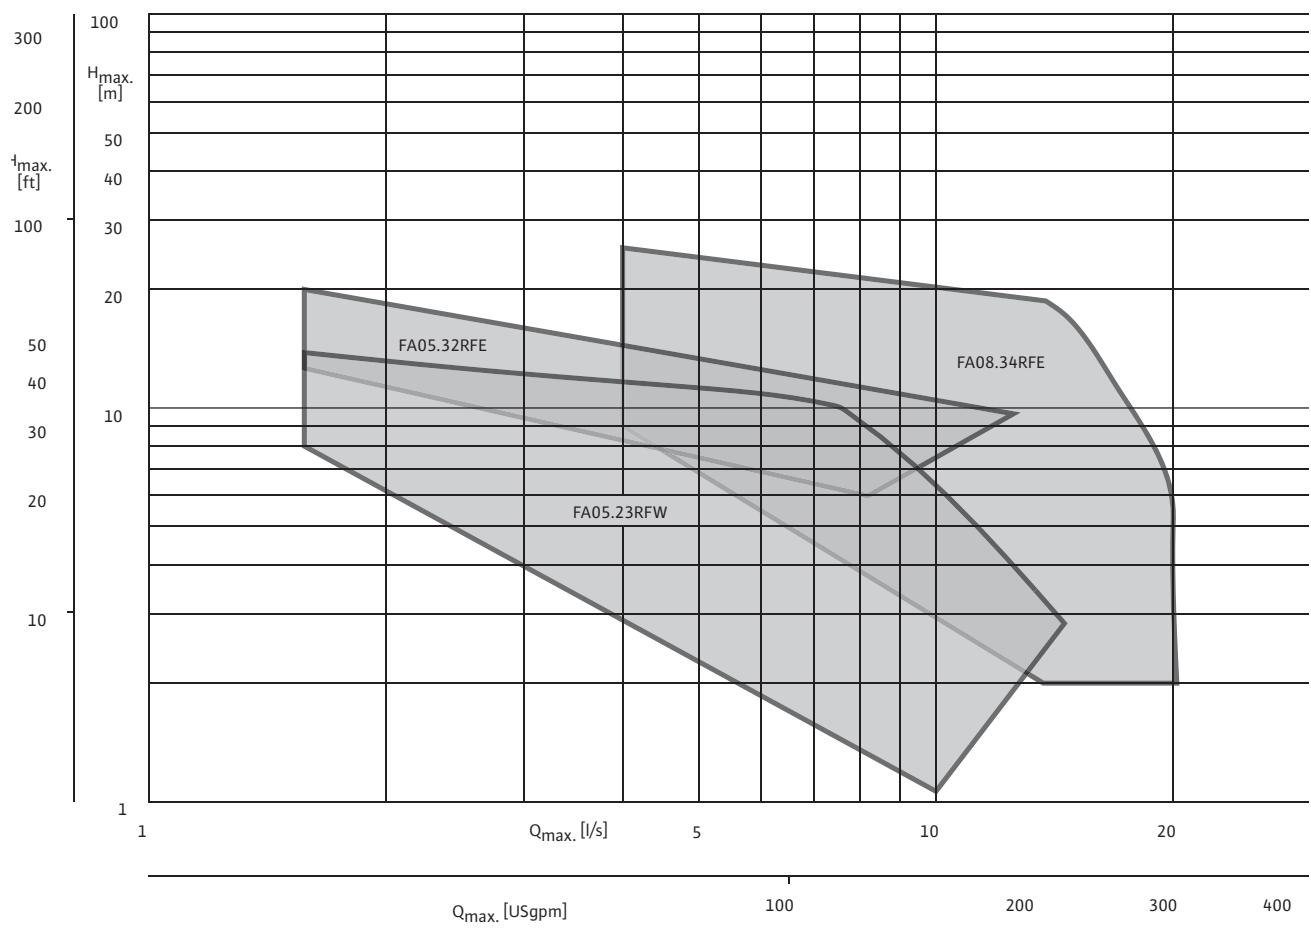

Pumps for Special Applications

Propeller pumps with submersible motor for use in pipe sumps

Series description Wilo-EMU KPR...

Wilo-EMU KPR...

Propeller pump with submersible motor for use in pipe sumps

Type key for hydraulics

Example: Wilo-EMU KPR 760-16°

KPR = Axial pump
760 = Propeller diameter
16° = Angle setting of the propeller blade

Type key for motors

Example: Wilo-EMU T49-10/70P Ex

T = Motor version
49 = Size
8 = Number of poles
70 = Package length
P = Motor for propeller pump
Ex = Ex approval

Fields of application

Pumping of mechanically pre-cleaned sewage and activated sludge in water treatment systems.

Further fields of application are in flood protection, as well as industrial and cooling water supplies in the industrial and commercial areas.

Construction

Submersible sewage pump as submersible monobloc unit for wet sump installation.

Hydraulics

Housing and impeller made of grey cast iron. The ball passages are between 85 and 130 mm. Adjustable axial impellers for adapting to changed system conditions.

Motor

Motor housing made of grey cast iron.

The air-filled T-motors give off their heat to the surrounding fluid. The units can only be operated directly in the pipeline in wet sump installation due to their design.

The cable inlet is sealed longitudinally watertight. The cable length can be individually configured.

Sealing

The sealing of the motor space from the fluid is done in various ways. There are different variants, depending on the type of motor:

- Two mechanical seals (G)
- Block seal cartridge (K)

Options

- Special materials and coatings against corrosion and abrasion
- Diverse monitoring equipment depending on the type of motor (sealing chamber control, bimetal or PTC thermistor temperature sensor, bearing temperature, ...)
- Switchgears
- Level controls
